**Atmospheric Physics** Julio V. Iribarne, H.-R. Cho, 2012-12-06 The extraordinary growth and development of atmospheric sciences during the last decades and the concern for certain applied problems such as those related to the environment have prompted the introduction of college and university courses in this field There is consequently a need for good textbooks A few appropriate books have appeared in the last few years aimed at a variety of levels and having different orientations Most of them are of rather limited scope in particular a number of them are restricted to the field of dynamics and its meteorological applications There is still a need for an elementary yet comprehensive survey of the terrestrial atmosphere This short volume attempts to fill that need This book is intended as a textbook that can be used for a university course at a second or third year level It requires only elementary mathematics and such knowledge of physics as should be acquired in most first year general physics courses It may serve in two ways A general review of the field is provided for students who work or plan to work in other fields such as geophysics geography environmental sciences space research but are interested in acquiring general information at the same time it may serve as a general and elementary introduction for students who will later specialize in some area of atmospheric science

#### **Chemistry of the Lower Atmosphere** S.

Rasool, 2012-12-06 About three years ago Catherine de Berg and I published a short article in Nature in which we attempted to explain why the chemistry of the atmosphere of the Earth is today so completely different from that of our two neighboring planets Mars and Venus Our atmosphere is composed mainly of  $N_2$  and  $O_2$  with traces of  $Ar$ ,  $H_2O$ ,  $CO_2$  etc while the atmospheres of both Mars and Venus are almost entirely made up of  $CO_2$  Also the Earth appears to be the only one of the three planets which has oceans of liquid water on the surface Since the presence of liquid water on Earth is probably an essential requirement for life to have originated and evolved to its present state the question of the apparent absence of liquid water on Mars and Venus suddenly acquires significant proportions In our paper in Nature and later in a more detailed discussion of the subject Planetary Atmospheres in Exobiology edited by C Ponnamperna North Holland Publishing Co we tried to describe why we believe that in the early history of the solar system all the terrestrial planets lost the atmospheres of  $H_2$  and He which they had acquired from the solar nebula at the time of their formation These planets completely devoid of atmospheres like the Moon today started accumulating new gases which were exhaled from the interior by the commencement of volcanic activity

#### **Science, Technology, and Society** David D. Kumar, Daryl E. Chubin, 2012-12-06

David D Kumar and Daryl E Chubin We live in an information age Technology abounds information technology communication technology learning technology As a once popular song went Something's happening here but it's just not exactly clear The world appears to be a smaller less remote place We live in it but we are not necessarily closely tied to it We lack a satisfactory understanding of it So we are left with a paradox In an information age information alone will neither inform nor improve us as citizens nor our democracy society or institutions No improvement will take some effort It is a

heavy burden to be reflective indeed analytical and disciplined but only constructively constrained by different perspectives The science based technology that makes for the complexity contro versy and uncertainty of life sows the seeds of understanding in Science Technology and Society STS as it is known encompasses a hybrid area of scholarship now nearly three decades old As D R Sarewitz a former geologist now congressional staffer and an author put it After all the important and often controversial policy dilemmas posed by issues such as nuclear energy toxic waste disposal global climate change or biotech nology cannot be resolved by authoritative scientific knowledge instead they must involve a balancing of technical considerations with other criteria that are explicitly nonscientific ethics esthetics equity ideology Trade offs must be made in light of inevitable uncertainties Sarewitz 1996 p 182

**Climates of the British Isles** Elaine Barrow,Mike Hulme,2014-01-14 Our understanding of climate and its role in human affairs has changed markedly over recent years as have climate observation systems and modelling capabilities Reliance on recent weather statistics to provide a guide for future climate is no longer viable Evidence of human induced climate change has placed climate high on political and the media agendas Climates of the British Isles provides a comprehensive account of what we know about climate and changing climates at the end of the twentieth century Integrating

the historical and geographical dimensions of climate the crucial link between past and future climatic conditions is examined through the geographical lens of the British Isles. Climates of past ages are reconstructed and full descriptions of present climate are illustrated by a wealth of graphs, maps, and images. Important climate data sets are provided. Marking the twenty-fifth anniversary of the internationally acclaimed Climatic Research Unit, this book distils much of the leading research of present and recent members of the unit and presents an authoritative, accessible view of climatic change and prospects for the next millennium and beyond.
