in terms of non observable theoretical entities such as molecules and electrons and orbitals which probably seem as familiar and real to a chemistry teacher as Bunsen burners and yet comprise a realm as alien and strange to many students as some learners own alternative conceptions misconceptions may appear to the teacher All chemistry teachers know that chemistry is a conceptual subject especially at the upper end of secondary school and at university level and that some students struggle to understand many chemical ideas This book offers a step by step analysis and discussion of just why some students find chemistry difficult by examining the nature of chemistry concepts and how they are communicated and learnt The book considers the idea of concepts itself draws upon case studies of how canonical chemical concepts have developed explores how chemical concepts become represented in curriculum and in classroom teaching and discusses how conceptual learning and development occurs This book will be invaluable to anyone interested in teaching and learning and offers guidance to teachers looking to make sense of and respond to the challenges of teaching chemistry EBOOK: Psychology: The Science of Mind and Behaviour, 4e Nigel Holt, Andy Bremner, Ed Sutherland, Michael Vlieg, Michael Passer, Ronald Smith, 2019-03-01 EBOOK Psychology The Science of Mind and Behaviour 4e *Annual Review of Materials Science* Robert A.
