

### Price Monopoly

Like other producers, price monopolists determine a profit-maximizing price by producing at an output where marginal revenue (MR) equals marginal cost (MC). But with no competitive market, price-profit-maximizers are the market, too. As a consequence, “dead loss” (the portion of total demand curve that also must be kept at buyers’ demand price) marginal cost is below price. This entry compares the monopolist’s choice of output level.
