Phan Cong Vinh, Vangalur Alagar, 2016-04-16 This book constitutes the thoroughly refereed proceedings of the 4th International Conference on Context Aware Systems and Applications ICCASA 2015 held in Vung Tau Vietnam in November 2015 The 44 revised full papers presented were carefully selected and reviewed from over 100 submissions The papers cover a wide spectrum of issues in the area of context aware systems CAS and context based recommendation systems CAS is characterized by its self facets such as self organization self configuration self healing self optimization self protection and so on whose context awareness used to dynamically control computing and networking functions The overall goal of CAS is to realize nature inspired autonomic systems that can manage themselves without direct human interventions Fuzzy Systems Ahmad Taher Azar, 2010-02-01 While several books are available today that address the mathematical and philosophical foundations of fuzzy logic none unfortunately provides the practicing knowledge engineer system analyst and project manager with specific practical information about fuzzy system modeling Those few books that include applications and case studies concentrate almost exclusively on engineering problems pendulum balancing truck backerupers cement kilns antilock braking systems image pattern recognition and digital signal processing Yet the application of fuzzy logic to engineering problems represents only a fraction of its real potential As a method of encoding and using human knowledge in a form that is very close to the way experts think about difficult complex problems fuzzy systems provide the facilities necessary to break through the computational bottlenecks associated with traditional decision support and expert systems Additionally fuzzy systems provide a rich and robust method of building systems that include multiple conflicting cooperating and collaborating experts a capability that generally eludes not only symbolic expert system users but analysts who have

turned to such related technologies as neural networks and genetic algorithms Yet the application of fuzzy logic in the areas of decision support medical systems database analysis and mining has been largely ignored by both the commercial vendors of decision support products and the knowledge engineers who use them
