

From DNA to Protein Synthesis

1P's challenge:

What are the steps involved in making a protein?

Background Info:

What is a protein? Amino acids. Amino acids are the building blocks for the construction of proteins. They are joined together by peptide bonds to form a polypeptide chain. The sequence of amino acids in a polypeptide chain determines the structure and function of the protein. The structure of a protein is determined by the sequence of amino acids in the polypeptide chain. The function of a protein is determined by its structure.

So, the first step in making a protein is to determine the sequence of amino acids in the polypeptide chain. This is done by determining the sequence of nucleotides in the DNA that codes for the protein.

Learning Objectives:

How do we know?
