Ultrasound for Precision Medicine: Diagnosis, Drug Delivery and Image-Guided Therapy Fei Yan,Jean Jose,Xiaobing Wang,2020-08-07 Precision medicine is an approach that proposes customized medical care based on the individual characteristics of each patient The rapidly emerging field not only holds great promise for diagnosis of disease and prediction of risk of developing diseases but also offers the possibility of remarkably fine tuned remedies to improve patient health while minimizing the risk of harmful side effects Many technologies including genetics informatics and medical imaging are rapidly expanding the scope of precision medicine Among these technologies imaging is poised to play a major role in the age of precision medicine By characterizing anatomy physiology and metabolism of the patient medical imaging enables precise personalized procedures and predictive patient specific therapy selection In recent years image guided treatment procedures are becoming more and more common in hospitals replacing conventional surgery or allowing faster recoveries with fewer post procedure complications As the most widely used modality ultrasound is playing an increasingly important role towards moving precision medicine into clinical practice It is a safe inexpensive diagnostic tool and capable of producing real time and non invasive images without significant biological effects To date lots of ultrasound imaging technology such as gray scale color Doppler flow imaging CDFI contrast enhanced ultrasound CEUS elastography have been developed which have greatly improved disease diagnosis treatment and prognosis Thanks to these progress ultrasound imaging has also been used in fields that were not previously involved such as the lungs and musculoskeletal tissues With the rapid development of ultrasound contrast agents ultrasound molecular imaging is moving from animal study into clinical practice First in human results of ultrasound molecular imaging with BR55 a kinase insert domain receptor KDR targeted contrast microbubble in patients with breast and ovarian lesions have been reported in 2017 Taking advantage of microbubble cavitation effect ultrasound assisted drug delivery technology also makes great progress The clinical trial of blood brain barrier disruption for chemotherapy delivery in the brain had been conducted and confirmed its safety and well toleration in patients with recurrent glioblastoma GBM Moreover ultrasound provides an advantageous tool for image guided therapy due to its capability of real time imaging for deep tissues contributing to greatly improved localization and targeting

of diseased tissues More interestingly by imaging these drug loaded contrast agents ultrasound mediated drug delivery can be visualized All of the above examples help demonstrate the promising potential of ultrasound in precision medicine not only for disease diagnosis but also for treatment selection and prognosis evaluation The present Research Topic here in Frontiers in Pharmacology aims to bring a collection of research describing ultrasound used for precision medicine in diagnosis drug delivery and image guided therapy

Advanced Quantitative Indexes in Cardiovascular Magnetic Resonance Imaging Xiaoyue Zhou,Rob J. Van Der Geest,Yucheng Chen,Peng Hu, Ming Yen Ng,2024-08-28 In the past decades advanced quantitative indexes obtained by cardiovascular magnetic resonance imaging CMRI such as myocardial strain myocardial T1 ECV T2 T2 relaxation value myocardial blood flow quantification index and hemodynamics indexes have been proposed as an alternative for non invasive quantitative evaluation in various cardiovascular diseases Those quantitative indexes have been proven to be more sensitive in assessing

the early change of myocardial tissue ventricular function or hemodynamics compared to the conventional qualitative methods. However, there are many challenges in the accurate measurement of those indexes as well as the evaluation of their clinical significance in the diagnosis and prognosis of a certain disease. Besides quality control and standardization of those indexes, become crucial when promoting them into clinical practice. This Research Topic will offer comprehensive reviews and original research articles of the newly emerged quantitative CMRI methods and the clinical insights of the diagnostic and prognostic value of those advanced CMRI indexes. CMRI techniques such as myocardial strain analysis, quantitative myocardial tissue mapping, 2 dimensional, 4 dimensional flow quantification and quantitative perfusion will be of our interest. The aim of this Research Topic will be to highlight the promising technical improvements in the accurate measurement of the CMRI indexes and or the added value of those indexes in disease diagnosis and prognosis. Meanwhile, quality control and standardization of the advanced CMRI indexes in multi centre multi vendor research projects will be discussed.
