sea waves has always been in the focus of mankind s atten tion This is attributed not only to a desire to understand the
behaviour in seas and oceans but also it has some practical necessity Developing up to date wind wave numerical methods
requires detailed mathematical modelling starting with wave generation development propagation and transformation on the
surface in different water areas under quasi stationary conditions up to a synthesis of climatic features observed under
different wave generation conditions in oceans sea or coastal areas The present monograph considers wind waves in terms of
the most general formulation of the problem as a probable hydrodynamic process with wide spatial variability It ranges
between the global scale of the oceans whose typical size is comparable with the Earth s radius to the regional and local
scales of the seas including water areas limited in space with significant current or depth gradients in coastal zones where
