

# Algebra 2 Segment 2 Honors Project: Task 1

## Task 1 (of 3)

The first task of the Segment Two Honors Project is to select the Power Pill study participants' groups and research board officers.

### Part 1:

There are 40 volunteers for the research study on the Power Pill. Each subgroup of the study will contain 10 participants. Determine how many ways these participants can be selected and explain your method.

Because the order does not matter in this case, the method I used to determine how many ways these participants can be selected consisted of using the combination formula and factorials and plugging in the numbers from the description of the problem. Using this method, I found that there are 847,660,528 different ways the participants could be selected for each subgroup.

### Part 2:

There are 15 research doctors participating in the study and the research board needs to be established with the offices of director, assistant director, quality control analyst, and correspondent. (Doctors can only hold one office on the research board.) Determine how many ways this research board can be chosen and explain your process.

Based on the description of the research board and the fact that the doctors can only hold one office, I can see that the order does matter, and the permutation formula needs to be used. After plugging in the numbers from the description, I can see that there are 32,760 different ways the research board can be chosen.
