

Hydrogeological assessment report for Kashig village

Introduction:

Kashig village in Mulshi taluka of Pune District is located on the southern slopes of the fort Tikona near Lake Hadashi. Although the village receives good rainfall, it is reported by the local administrative body that they experience severe water scarcity during summer, with the drying up of dug wells and spring sources. ACWADAM with the support of Ford Foundation, conducted a hydrogeological survey with an objective to recommend recharge areas for construction of conservation structures to rejuvenate springs in the area.

Of the several sources, springs act as an important source of drinking water especially during summer. An inventory of 9 important springs was undertaken which spread over an area of approximately 350 hectares.

ACWADAM's inputs to this community water governance initiative were supported through a grant from Ford Foundation on the programme on Groundwater Governance.
