

Programmable time switch - IHP

Self-programmable time switches are used to program automatic operation of heating, lighting, ventilation... in an accurate manner.

They control opening and closing of independent circuits according to a program set by the user by memorization of On and Off switching operations.

With 4 keys, a large screen and fast-guided intuitive programming, they are easy to program and to use.

With the external input, they can be controlled with a switch or push-button away from the electrical distribution panel (board).

With the memory key, saving and duplication of programs can be done easily.

With the programming kit, more complex programs can be created with a PC and then downloaded to the products.

With the electrical distribution combi-busbar mechanical compatibility and the screw-less connection, the installation becomes simple, faster and more intuitive.

Benefits

Reduction of electrical energy consumption (the installation only operates when necessary, operation during the just favorable rate periods).

Increased user comfort (automation of operating periods, triggering accuracy).

Enhanced user safety by using the random operating mode proposed by the 4 versions to simulate presence.

Applications

They are adapted to all application types (heating, lighting, ventilation, access control...) irrespective of the sector of activity (residential, tertiary, public building, agriculture, industry, etc.).
