Symmetry in Geometry and Analysis, Volume 1 Michael Pevzner, Hideko Sekiguchi, 2025-02-09 Symmetry in Geometry and Analysis is a Festschrift honoring Toshiyuki Kobayashi. The three volumes feature 35 selected contributions from invited speakers of twin conferences held in June 2022 in Reims France and in September 2022 in Tokyo Japan. These contributions highlight the profound impact of Prof Kobayashi's pioneering ideas, groundbreaking discoveries, and significant achievements in the development of analytic representation theory, noncommutative harmonic analysis, and the geometry of discontinuous groups beyond the Riemannian context, among other areas over the past four decades. The first volume of the Festschrift includes a survey article on Kobayashi's innovative contributions to Mathematics, emphasizing their influence and introducing new perspectives across various fields. Original articles contained in Volume 1 focus on differential geometry with symmetries, as well as algebraic and geometric aspects of representation theory of reductive Lie groups and related topics. Contributions are by Velleda Baldoni, Dan Barbasch, Leticia Barchini, Sigiswald Barbier, Yves Benoist, Sam Claerebout, Michael Eastwood, Wee Teck Gan, William M Goldman, Roger Howe, Kazuki Kannaka, Toshihisa Kubo, Hung Yean Loke, Jia Jun Ma, Reiko Miyaoka, Kento Ogawa, Takayuki Okuda, Yoshiki Oshima, Paul mile Paradan, Annegret Paul, Michael Pevzner, Yiannis Sakellaridis, Atsumi Sasaki, Gordan Savin, Hideko Sekiguchi, Binyong Sun, Yuichiro Tanaka, Koichi Tojo, Peter Trapa, Mich le Vergne, Joseph A Wolf, Kayue Daniel Wong, and Chen Bo Zhu. Lie Theory and Its Applications in Physics Vladimir Dobrev, 2023-01-29. This volume presents modern trends in the area of symmetries and their applications based on contributions to the Workshop Lie Theory and Its Applications in Physics held in Sofia Bulgaria on line in June 2021. Traditionally Lie theory is a tool to build mathematical models for physical systems. Recently the trend is towards geometrization of the mathematical description of physical systems and objects. A geometric approach to a system yields in general some notion of symmetry which is very helpful in understanding its structure. Geometrization and symmetries are meant in their widest sense, i.e. representation theory, algebraic geometry, number theory, infinite dimensional Lie algebras and groups, superalgebras and supergroups, groups and quantum groups, noncommutative geometry, symmetries of linear and nonlinear partial differential operators, special functions, and others. Furthermore, the necessary tools from functional analysis are included. This is a big interdisciplinary and interrelated field. The topics covered in this Volume are the most modern trends in the field of the

The Primacy of PISA Joseph M. Piro, 2019-08-21 Every three years the world awaits the results of the Programme for International Student Assessment or PISA the rankings of school systems overseen by the Organisation for Economic Co operation and Development OECD Nations around the world look eagerly and apprehensively to see where their students rank on these tests of competence in mainly science math and reading This book provides a window into PISA and its power What exactly is PISA How are its tests developed Who takes the test What countries tend to outperform and which underperform What do countries learn from PISA Why is PISA both revered and feared And most importantly does PISA improve education globally The first PISA in 2000 included 32 countries In 2018 nearly eighty nations took part in PISA That number is expected to double by 2030 This may mean that students in over 80% of the world s countries will take the PISA exams This scenario has made PISA more important than ever This book probes topics and themes related to the world s most important exam and why many view a high PISA ranking rightly or wrongly as global education s seal of approval Because of this PISA has been called a disruptor a test which can trigger major reform in school systems around the world But is it the PISA rankings that are the real disruptor

or the decisions countries make because of their rankings These decisions often involve systemic changes in teaching and learning which can substantially alter how a country measures and prioritizes its education system *Aero/space Engineering ,1958*
