Mathematics Grdnovember 2014:

Caught in the Act Cyril Julie, Lorna Holtman, Charles R. Smith, 2019-12-11 The research reported in Caught in the Act draws together the insights gained from a continuous professional development initiative for high school mathematics teachers teaching in low socio economic status and socially challenged environments in South Africa The chapters show the possibilities for enhancing achievement in school mathematics if a strength based approach is adopted to develop teaching with teachers and when their concerns are taken seriously The book demonstrates that the ecological relevance fitness for the context in which teachers are teaching of the goods developed and distributed by initiatives should be a major consideration to offer hope for sustainable implementation to improve school mathematics education The book is of interest to mathematics teachers school leaders mathematics curriculum advisors policy makers and researchers **Daily Graphic**

Ransford Tetteh, 2014-09-25 **Teaching and Learning Mathematics through Variation** Rongjin Huang, Yeping Li, 2017-02-06 Efforts to improve mathematics teaching and learning globally have led to the ever increasing interest in searching for alternative and effective instructional approaches from others Students from East Asia such as China and Japan have consistently outperformed their counterparts in the West Yet Bianshi Teaching teaching with variation practice which has been commonly used in practice in China has been hardly shared in the mathematics education community internationally This book is devoted to theorizing the Chinese mathematical teaching practice Bianshi teaching that has demonstrated its effectiveness over half a century examining its systematic use in classroom instruction textbooks and teacher professional development in China and showcasing of the adaptation of the variation pedagogy in selected education systems including Israel Japan Sweden and the US This book has made significant contributions to not only developing the theories on teaching and learning mathematics through variation but also providing pathways to putting the variation theory into action in an international context This book paints a richly detailed and elaborated picture of both teaching mathematics and learning to teach mathematics with variation Teaching with variation and variation as a theory of learning are brought together to be theorized and exemplified through analysis of teaching in a wide variety of classrooms and targeting both the content and processes of mathematical thinking Highly recommended Kaye Stacey Emeritus Professor of Mathematics Education University of Melbourne Australia Many teachers in England are excited by the concept of teaching with variation and devising variation exercises to support their pupils mastery of mathematics However fully understanding and becoming proficient in its use takes time This book provides a valuable resource to deepen understanding through the experiences of other teachers shared within the book and the insightful reflections of those who have researched this important area Debbie Morgan Director for Primary Mathematics National Centre for Excellence in the Teaching of Mathematics United Kingdom

Daily Graphic Kingsley Inkoom, 2014-09-06 **Novice Mathematics Teachers' Professional Learning** Xiaoli Lu, 2022-05-04 This book investigates three novice high school mathematics teachers professional learning processes in the

early stages of their careers at schools in Shanghai China Teacher professional learning is examined as a complex and dynamic system that connects both cognitive and situated perspectives on learning theory Inspiring mathematics teachers to adopt student focused pedagogies is challenging particularly in China where tensions in teacher centred content focused and examination oriented practices are predominant The three novice teachers who participated in this study brought different beliefs and knowledge derived from their different individual experiences to bear on their teaching practices However they were strongly influenced by the environments in which they taught and mainly adopted a professional learning approach to teacher centred practices despite reporting that they favoured student centred teaching practices The study also observed professional learning towards student centred pedagogical aspects in a single teacher case with mentorship support indicating that student centred pedagogies may be promoted within the constraints of the existing dominant teaching practice
