Question 1

[Maximum mark: 6]

In a particular city 20 % of the inhabitants have been immunized against a certain disease. The probability of infection from the disease among those immunized is $\frac{1}{10}$, and among those not immunized the probability is $\frac{3}{4}$. If a person is chosen at random and found to be infected, find the probability that this person has been immunized.

Question 2

[Maximum mark: 6]

A target consists of three concentric circles of radii 1 m, 3 m and 5 m respectively, as shown in the diagram.

diagram not to scale

Nina shoots an arrow at the target. She has a probability of $\frac{1}{2}$ of hitting the target. If the arrow hits the target it does so at a random point on the target. Ten points are scored for hitting region A, six points for hitting region B, and three points for hitting region C. Find the expected number of points Nina scores each time she shoots an arrow at the target.

Survive the IB! Nathan Taber, 2011 **Introducing the IB Diploma Programme** Marc Abrioux, Jill Rutherford, 2013-02-14 Schools wishing to introduce the IB diploma programme are faced with major investment in terms of time effort and money in order to become authorised This manual is a resource for schools already offering the diploma as well as for prospective diploma schools **The American Mathematical Monthly**, 1922 Includes section Recent publications **From Calculus to Computers** Amy Shell-Gellasch, Dick Jardine, 2005 Classroom resource material allowing the integration of mathematics history into undergraduate mathematics teaching Mathematical Modeling of Human Performance Errors William B. Askren, Thaddeus L. Regulinski, 1969 The research investigates the feasibility of modeling human performance errors in application to the reliability analyses of man machine systems The research addresses itself to time continuous tasks with the derivation of a general mathematical model of the probability of errorless performance which is equated to human performance reliability The application of this model and the implications of the time to first error concept were tested with a laboratory experiment using a vigilance task The observed times to first miss error times to first false alarm error and times to first combined miss and false alarm errors were ordered and through classical interference theory the underlying density functions were isolated A number of distributions were tested for goodness of fit with the data The Weibull Gamma and log normal distributions emerged as relevant paradigms The normal and exponential distributions were rejected It was concluded that the derived general mathematical model of human performance reliability and the expected value of the random variable time to first human error are meaningful ways to quantify human performance of time continuous tasks Author Reminiscences of a Statistician Erich L. Lehmann, 2007-12-26 This relatively nontechnical book is the first account of the history of statistics from the Fisher revolution to the computer revolution It sketches the careers and highlights some of the work of 65 people most of them statisticians What gives the book its special character is its emphasis on the author's interaction with these people and the inclusion of many personal anecdotes Combined these portraits provide an amazing fly on the wall view of statistics during the period in question The stress is on ideas and technical material is held to a minimum Thus the book is accessible to anyone with at least an elementary background in statistics Multivariate T-Distributions and Their Applications Samuel Kotz, Saralees Nadarajah, 2004-02-16 Almost all the results available in the literature on multivariate t distributions published in the last 50 years are now collected together in this comprehensive reference Because these distributions are becoming more prominent in many applications this book is a must for any serious researcher or consultant working in multivariate analysis and statistical distributions Much of this material has never before appeared in book form The first part of the book emphasizes theoretical results of a probabilistic nature In the second part of the book these are supplemented by a variety of statistical aspects Various generalizations and applications are dealt with in the final chapters The material on estimation and regression models is of special value for

practitioners in statistics and economics A comprehensive bibliography of over 350 references is included **Journal of Research of the National Institute of Standards and Technology** ,2005 *Statistical Literacy at School* Jane M. Watson,2013-05-13 This book reveals the development of students understanding of statistical literacy It provides a way to see student thinking and gives readers a deeper sense of how students think about important statistical topics Intended as a complement to curriculum documents and textbook series it is consistent with the current principles and standards of the National Council of Teachers of Mathematics The term statistical literacy is used to emphasize that the purpose of the school curriculum should not be to turn out statisticians but to prepare statistically literate school graduates who are prepared to participate in social decision making Based on ten years of research with reference to other significant research as appropriate the book looks at students thinking in relation to tasks based on sampling graphical representations averages chance beginning inference and variation which are essential to later work in formal statistics For those students who do not proceed to formal study as well as those who do these concepts provide a basis for decision making or questioning when presented with claims based on data in societal settings *Statistical Literacy at School Growth and Goals* establishes an overall framework for statistical literacy in terms of both the links to specific school curricula and the wider appreciation of contexts within which chance and data handling ideas are applied demonstrates within this framework that there are many connections among specific ideas and constructs provides tasks adaptable for classroom or assessment use that are appropriate for the goals of statistical literacy presents extensive examples of student performance on the tasks illustrating hierarchies of achievement to assist in monitoring gains and meeting the goals of statistical literacy and includes a summary of analysis of survey data that suggests a developmental hierarchy for students over the years of schooling with respect to the goal of statistical literacy *Statistical Literacy at School Growth and Goals* is directed to researchers curriculum developers professionals and students in mathematics education as well those across the curriculum who are interested in students cognitive development within the field to teachers who want to focus on the concepts involved in statistical literacy without the use of formal statistical techniques and to statisticians who are interested in the development of student understanding before students are exposed to the formal study of statistics *Continuous Univariate Distributions, Volume 2* Norman L. Johnson,Samuel Kotz,Narayanaswamy Balakrishnan,1995-05-08 Comprehensive reference for statistical distributions *Continuous Univariate Distributions Volume 2* provides in depth reference for anyone who applies statistical distributions in fields including engineering business economics and the sciences Covering a range of distributions both common and uncommon this book includes guidance toward extreme value logistics Laplace beta rectangular noncentral distributions and more Each distribution is presented individually for ease of reference with clear explanations of methods of inference tolerance limits applications characterizations and other important aspects including reference to other related distributions
