The Logic of Information Luciano Floridi,2019-01-21 Luciano Floridi presents an innovative approach to philosophy conceived as conceptual design He explores how we make transform refine and improve the objects of our knowledge His starting point is that reality provides the data to be understood as constraining affordances and we transform them into information like semantic engines Such transformation or repurposing is not equivalent to portraying or picturing or photographing or photocopying anything It is more like cooking the dish does not represent the ingredients it uses them to make something else out of them yet the reality of the dish and its properties hugely depend on the reality and the properties of the ingredients Models are not representations understood as pictures but interpretations understood as data elaborations of systems Thus he articulates and defends the thesis that knowledge is design and philosophy is the ultimate form of conceptual design Although entirely independent of Floridi s previous books The Philosophy of Information OUP 2011 and The Ethics of Information OUP 2013 The Logic of Information both complements the existing volumes and presents new work on the foundations of the philosophy of information

discrete objects such as integers or algebraic expressions but cannot represent real or complex numbers unless the numbers are rounded to approximate values from a discrete set A major concern of the theory is the number of computation steps required to solve a problem as a function of the length of the input string
