Microsoft Access Vehicle Maintenance Database:

Microsoft Access 2010 In Depth Roger Jennings, 2010-12-28 Access 2010 In Depth is the beyond the basics beneath the surface guide for everyone who wants to streamline their work with Access 2010 and get more done in less time. Legendary Access expert Roger Jennings provides specific tested proven solutions to the problems Access database users and developers run into every day. Challenges other books ignore or oversimplify Jennings thoroughly covers all facets of working with Access 2010 and adds new chapters on integration and collaboration with Microsoft SharePoint and emulating Table Triggers with Access Data Macros. New coverage also includes customizable Ribbon and Themes, the revamped Macro Designer, Quick Start Fields, IntelliSense support in Expression Builder, Application Parts, and Navigation Forms, conditional formatting, and data bars in reports and new web database publishing techniques. As with all In Depth books, Access 2010 In Depth presents comprehensive coverage, breakthrough techniques, exclusive shortcuts, quick access to information, troubleshooting help for tough problems, and real world examples with nothing glossed over or left out. Step by step instructions with icons guide readers through essential tasks such as designing tables, entering data, importing external data, designing and executing queries, and designing data entry forms and printed reports. Additional chapters on advanced form and report design emphasize data entry efficiency and presentation clarity. By Roger Jennings, a world renowned Access expert who has sold more than 1.25 million books. Covers all aspects of working with Access 2010 from the customizable Ribbon and Themes to conditional formatting, advanced web database publishing to SharePoint collaboration. For everyone who wants to get the most out of Access 2010 from hobbyists to power users to corporate developers. *Highway Maintenance Concept Vehicle Final Report* Stephen J. Andrle, 2002. This report documents Phase IV of the Highway Maintenance Concept Vehicle HMCV project, a pooled fund study sponsored by the Departments of Transportation of Iowa, Pennsylvania, and Wisconsin. This report provides the background, including a brief history of the earlier phases of the project, a systems overview, and descriptions of the research conducted in Phase IV. Finally, the report provides conclusions and recommendations for future research. **Background:** The goal of the Highway Maintenance Concept Vehicle Pooled Fund Study is to provide travelers with the level of service defined by policy during the winter season at the least cost to taxpayers. This goal is to be accomplished by using information regarding actual road conditions to facilitate and adjust snow and ice control activities. The approach used in this study was to bring technology applications from other industries to the highway maintenance vehicle. This approach is evolutionary in that as emerging technologies and applications are found to be acceptable to the pooled fund states and as they appear that to have potential for supporting the study goals, they become candidates for our research. The objective of Phase IV is to conduct limited deployment of selected technologies from Phase III by equipping a vehicle with proven advanced technologies and creating a mobile test laboratory for collecting road weather data. The research quickly pointed out that investments in winter storm maintenance assets must be based on

benefit cost analysis and related to improving level of service For example Iowa has estimated the average cost of fighting a winter storm to be about 60 000 to 70 000 per hour typically The maintenance concept vehicle will have advanced technology equipment capable of applying precisely the correct amount of material accurately tailored to the existing and predicted pavement conditions Hence a state using advanced technology could expect to have a noticeable impact on the average time taken to establish the winter driving service level If the concept vehicle and data produced by the vehicle are used to support decision making leading to reducing material usage and the average time by one hour a reasonable benefit cost will result Data from the friction meter can be used to monitor and adjust snow and ice control activities and inform travelers of pavement surface conditions Therefore final selection of successfully performing technologies will be based on the foundation statements and criteria developed by the study team
