Microwave NDT N. Ida, 2012-12-06 Microwave testing has been paid only scant attention in the literature as a method for nondestructive testing of materials yet it offers some attractive features especially for the testing of composite and other non metallic materials Microwave techniques have been used in a large number of applications that can be classified as nondestructive testing applications ranging from large scale remote sensing to detection of tumors in the body This volume describes a unified approach to microwave nondestructive testing by presenting the three essential components of testing theory practice and modelling While recognizing that each of these subjects is wide enough to justify a volume of its own the presentation of the three topics together shows that these are interrelated and should be practiced together While few will argue against a good theoretical background modelling and simulation of the testing environment is seldom part of the NDT training in any method but particularly so in microwave testing The text is divided in four parts The first part presents the field theory background necessary for understanding the microwave domain The second part treats microwave measurements as well as devices and sources and the third part discusses practical tests applicable to a variety of materials and geometries The fourth part discusses modelling of microwave testing Each chapter contains a bibliography intended to expand on the material given and in particular to point to subjects which could not be covered either as not appropriate or for lack of space For engineers applied physicists material scientists [Designing Microwave Sensors for Glucose Concentration Detection in Aqueous and Biological Solutions](#) Carlos G. Juan, 2021-06-14 This book presents a comprehensive study covering the design and application of microwave sensors for glucose concentration detection with a special focus on glucose concentration tracking in watery and biological solutions This book is based on the idea that changes in the glucose concentration provoke variations in the dielectric permittivity of the medium Sensors whose electrical response is sensitive to

the dielectric permittivity of the surrounding media should be able to perform as glucose concentration trackers At first this book offers an in depth study of the dielectric permittivity of water glucose solutions at concentrations relevant for diabetes purposes in turn it presents guidelines for designing suitable microwave resonators which are then tested in both water glucose solutions and multi component human blood plasma solutions for their detection ability and sensitivities Finally a portable version is developed and tested on a large number of individuals in a real clinical scenario All in all the book reports on a comprehensive study on glucose monitoring devices based on microwave sensors It covers in depth the theoretical background provides extensive design guidelines to maximize sensitivity and validates a portable device for applications in clinical settings
