

Part 1

1. When a horse pulls a wagon, the force that causes the horse to move forward is
- (a) the force he exerts on the ground.
 - (b) the force he exerts on the wagon.
 - (c) the force the ground exerts on him.
 - (d) the force the wagon exerts on him.

Answer (c): This is the only force acting on him in the forward direction.

2. A coin is tossed vertically up in the air. It first rises and then falls. As the coin passes through its highest point the net force on it
- (a) becomes zero.
 - (b) acts downwards and reaches a maximum value.
 - (c) acts downwards and reaches a minimum value.
 - (d) acts downwards and remains constant.

Answer (d): The force due to gravity acts downwards and is constant.

3. A helicopter flies horizontally with constant velocity. The net force acting on it is
- (a) parallel to the velocity.
 - (b) vertically upward.
 - (c) vertically downward.
 - (d) zero.

Answer (d): Velocity is constant so the net force is zero by Newton's 1st Law

4. A constant force is exerted on a cart that is initially at rest on a track. Friction between the cart and the track is negligible. The force acts for a short time interval and gives the cart a certain final speed. To reach the same final speed with a force that is only half as big, the force must be exerted on the cart for a time interval
- (a) four times as long as for the stronger force
 - (b) twice as long as for the stronger force
 - (c) half as long as for the stronger force
 - (d) a quarter as long as for the stronger force

Answer (b): If the force is half as big but the mass is the same then the acceleration is half as big so it takes twice as long to reach the same velocity.
