

Article Critique

Writing an article critique is often confused with an article summary where the article's contents are summarized and paraphrased into an essay. Although some summarizing of the article is needed in the introduction, an article critique focuses on the author's writing in such areas as claim (how well it's supported) and appeal (how effectively the author presents the material). Think of it this way: you are a movie critic, reviewing a director's choice of script, actors, and graphics so that the audience will know whether the movie is good or not. The critic does not simply tell you what the movie is about but lets you know how the director made it great. In the same way, the writer of an article critique **will** talk about what the author did to make the article effective or ineffective and gives advice on how it could have been better.

What you gain from the article is only as effective as what you bring to it. Therefore, before reading the article, be sure to have a highlighter and a pen or pencil close by so that when you read something relevant or have a sudden idea, you can write it down or mark it. Always read the article twice. On the second time, make highlights and notes of the following circumstances:

What is the author claiming through the article? Is there more than one claim? Does the author support or contradict his or her own claim? A body paragraph could look like this one below:

- In the article, Spetalnick's main claim seems to be clearly stated in the title "Obama and Syria: The Education of a Reluctant President." This claim, although stated as the title, is **not** the only claim the author makes in the article. As a matter of fact, it is quite the opposite. As one reads past the first few lines, it is clear that being "reluctant" is not the author's main argument at all. For **example**, the article states, "Since the war in Syria began, Obama has repeatedly denounced the killing of innocent civilians - more than 100,000 people have already died in the 2-1/2-year conflict - while declaring his determination to avoid getting the United States sucked in." How is this claim supporting the topic of "Education of a Reluctant President?" It does not; that is why the title is **misleading**.

Why should you believe what the author has to say? Is the author credible? Are the outside sources credible? Did the author provide information about his/herself as well as information about the outside sources?

- The critique's introduction can show why the author is or is not credible by examining his/her background or notoriety. Sometimes, added research about the author is needed to find this information. There are other ways, however, that an author is believable through the use of **credible outside source** such as using a website to support your claim. **Following is an example of how to construct a body paragraph around this issue:**

Handbook of Research on Developing Students' Scholarly Dispositions in Higher Education Zimmerman, Aaron Samuel, 2021-06-25. Scholarly dispositions represent the practices and habits of mind that support consistent success in teaching, learning and knowledge creation. To be successful in their undergraduate and graduate education, students must develop academic skills that transcend content knowledge such as receiving and responding to critical feedback and learning how to collaborate, master academic writing and be mindful of ethical research practices. Much is still unknown about how to teach dispositions such as how to design a curriculum to best cultivate habits of mind and this book attempts to address this gap while providing practical methods and strategies that can help higher education practitioners to cultivate and assess the scholarly dispositions of their students effectively. The Handbook of Research on Developing Students' Scholarly Dispositions in Higher Education provides insight on dispositions that students must learn in higher education and how higher education faculty can help students to develop these dispositions as well as evidence-based methods that help develop scholarly dispositions for undergraduate and graduate education. This book provides a plethora of information on scholarly dispositions and related elements including teaching, time management, collaboration and research ethics. It is an ideal reference source for teachers, academicians, administrators, researchers and students aspiring to become researchers and scholars themselves.
