help them build reports from scratch For this programmer I wrote 13 chapters which teach you everything about adding reports to ASP NET and Windows applications It starts with the basics of building reports to adding charts crosstab reports sorting and grouping subreports and using the formula editor with Basic syntax and Crystal syntax The second type of programmer has been using Crystal Reports for years and is mostly concerned with how to do technical runtime customization of reports For this programmer I researched and diagrammed the undocumented report object models I included dozens of examples in both VB NET and C to show you how to modify reports manipulate different data sources XML ADO NET ODBC OLE DB stored procedures with parameters modify formulas and report parameters and integrate NET with the RAS and RDC The dozens of emails I received when the book was online were instrumental for doing a major revision of many chapters before publishing the book in hardcopy format Since releasing the book I continue to receive more emails from people They regret that the free book isn't online anymore but understand that it couldn't last forever and that the hardcopy version is even better I hope you like it and that it helps you achieve your reporting goals September 2004 Update Due to high demand I did a second printing of the book I took advantage of this opportunity to go through the book and remove all grammatical errors The content is the same but the typos have been corrected *Mastering Visual Basic .NET* Evangelos Petroutsos, 2006-02-20 VB Programmers Get in Step with NET With the introduction of Visual Basic NET VB transcends its traditional second class status to become a full fledged citizen of the object oriented programming letting you access the full power of the Windows platform for the first time Written by the author of the best selling Mastering Visual Basic 6 this all new edition is the resource you need to make a successful transition to NET Comprising in depth explanations practical examples and handy reference information its coverage includes Mastering the new Windows Forms Designer and controls Building dynamic forms Using powerful Framework classes such as ArrayLists and HashTables Persisting objects to disk files Handling graphics and printing Achieving robustness via structured exception handling and debugging Developing your own classes and extending existing ones via inheritance Building custom Windows controls Building menus and list controls with custom drawn items Using ADO NET to build disconnected distributed applications Using SQL queries and stored procedures with ADO NET Facilitating database programming with the visual database tools Building web applications with ASP NET and the rich web controls Designing web applications to access databases Using the DataGrid and DataList web controls Building XML web services to use with Windows and web applications Special topics like the Multiple Document Interface and powerful recursive programming techniques Note CD ROM DVD and other supplementary materials are not included as part of eBook file [Microsoft SQL Server 2005 Reporting Services](#) Michael Lisin, Jim Joseph, 2006-03-22 SQL Server Reporting enables the creation management and delivery of both traditional paper oriented reports and interactive Web based reports An integrated part of the Microsoft business intelligence framework Reporting Services combines the data management capabilities of SQL Server and Microsoft Windows Server with familiar and powerful
