Chapter four covers the basic design principles and systems related to stability. Precast concrete structures should be designed according to a specific stability concept unlike cast in situ structures. Chapter five discusses structural connections. Chapters six to nine address the four most commonly used systems or subsystems of precast concrete in buildings, namely portal and skeletal structures, wall frame structures, floor and roof structures, and architectural concrete facades. In chapter ten, the design and detailing of a number of specific construction details in precast elements are discussed, for example supports, corbels, openings, and cutouts in the units, special features related to the detailing of the reinforcement, and so forth. Chapter eleven gives guidelines for the fire design of precast concrete structures. The handbook concludes with a list of references to good literature on precast concrete construction.
