## **Geomorphology According To Zimsec Alevel Syllabus:**

Syllabus in Geography, 1974      **Principles of geomorphology** William David Thornbury, 1958      *Principles of Geomorphology* William David Thornbury, 1954      *Fundamentals of Geomorphology* Richard Huggett, Emma Shuttleworth, 2022-12-22 This revised and updated edition continues to provide a comprehensive introduction to the subject exploring the world's landforms from a broad systems perspective. It covers the basics of Earth surface forms and processes while reflecting on the latest developments in the field. *Fundamentals of Geomorphology* begins with a consideration of the nature of geomorphology including its relation to society, process and form, history and geomorphic systems and moves on to discuss Structure structural landforms associated with plate tectonics and those associated with volcanoes and folds, faults and joints. Process and form landforms resulting from or influenced by the exogenic agencies of weathering, running water, flowing ice and meltwater, ground ice and frost, the wind and the sea. Landforms developed on limestone, extraterrestrial landforms and landscape evolution. A discussion of ancient landforms. *Fundamentals of Geomorphology* provides a stimulating and innovative perspective on the key topics and debates within the field of geomorphology. Written in an accessible and lively manner, it includes guides to further reading, chapter summaries and an extensive glossary of key terms. The book is also illustrated throughout with over 200 informative diagrams and attractive photographs, all in colour. It is supported by online resources for students and instructors.      Fundamentals of Geomorphology Richard Huggett, 2013-07-04 This extensively revised and updated edition continues to present an engaging and comprehensive introduction to the subject exploring the world's landforms from a broad systems perspective. It reflects on the latest developments in the field and includes new chapters on geomorphic materials and processes, hillslopes and changing landscapes. *Fundamentals of Geomorphology* is an engaging and comprehensive introduction. Starting with a consideration of the nature of geomorphology and the geomorphic system, geomorphic materials and processes and the quest of process and historical geomorphologists, it moves on to discuss structure landforms resulting from or influenced by the endogenic agencies of tectonic and volcanic processes, geological structures and rock types, process and form landforms resulting from or influenced by the exogenic agencies of weathering, running water, flowing ice and meltwater, ground ice and frost, the wind and the sea, history, earth surface history, giving a discussion of Quaternary landforms and ancient landforms including the origin of old plains, relict exhumed and stagnant landscape features and evolutionary aspects of landscape change. *Fundamentals of Geomorphology* provides a stimulating and innovative perspective on the key topics and debates within the field of geomorphology. Written in an accessible and lively manner, it includes guides to further reading, chapter summaries and an extensive glossary of key terms. The book is also illustrated throughout with over 200 informative diagrams and attractive photographs, including a colour plate section.      Geomorphology James Mervyn Nicholson, J. G. Morton, 1973      **Advance Level Syllabus**, 2013      Geomorphology of Desert Environments Anthony J. Parsons, A. D. Abrahams, 2009-03-20 About one third of the Earth's

land surface experiences a desert climate and this area supports approximately 15% of the planet's population. This percentage continues to grow and with this growth comes the need to acquire and apply an understanding of desert geomorphology. Such an understanding is vital in managing scarce and fragile resources and in mitigating natural hazards. This authoritative reference book is comprehensive in its coverage of the geomorphology of desert environments and is arranged thematically. It begins with an overview of global deserts, proceeds through treatments of weathering, hillslopes, rivers, piedmonts, lake basins, and aeolian surfaces, and concludes with a discussion of the role of climatic change. Written by a team of international authors, all of whom are active in the field, the chapters cover the spectrum of desert geomorphology.

**Geomorphology** Jon French, 2004      **The Basics of Geomorphology** Kenneth J. Gregory, John Lewin, 2014-10-20 I can think of no better guides than Professors Ken Gregory and John Lewin to lead the reader through the conceptual basis of this exciting science. Victor R. Baker, University of Arizona. A very readable and informative introduction to the discipline for senior undergraduates, postgraduates, and researchers. Angela Gurnell, Queen Mary University of London. Time will tell, but this book may well mark a turning point in the way students and scientists alike perceive Earth surface processes and landforms. Jonathan Phillips, University of Kentucky. This student-focused book provides a detailed description and analysis of the key concepts, ideas, and hypotheses that inform geomorphology. Kenneth Gregory and John Lewin explain the basics of landform science in 20 concepts, each the subject of a substantive cross-referenced entry. They use the idea of the geomorphic system to organise entries in four sections, with extensive web resources provided for each: System Contexts, The Systems Approach, Uniformitarianism, Landform Form, Process and Materials, Equilibrium, Complexity, and Non-Linear Dynamical Systems, System Functioning, Cycles and Cascades, Force Resistance, Geomorphic Work, Process Form, Models, System Adjustments, Timescales, Forcings, Change, Trajectories, Inheritance, and Sensitivity, Anthropocene Drivers for the Future, Geomorphic Hazards, Geomorphic Engineering, Design, and Prediction. Aligned with the teaching literature, this innovative text provides a fully functioning learning environment for study, revision, and even self-directed research for both undergraduate and postgraduate students of geomorphology.

**Introduction to Geomorphology II** William A. Szary, 2015-03-12 Introduction to Geomorphology II continues the geomorphology series with expanding the description of landscapes. Book I, in the context of geologic structure, landforms, and the basic principles which shape landforms and landscapes, Book I addressed geomorphic provinces in terms of landscapes and geologic history behind each province. Many photographic examples are presented in both books. Book II covers constructive, destructive, mass wasting, fluvial, river, glacial, and coastal processes. Photographs obtained from public domain sources are cited for source and author. Where no citations are provided, photographs were taken by the author. Both books in this series are intended for those in secondary school, community college, and first-year undergraduate level of studies in geology and the earth science curricula.

**Key Concepts in Geomorphology** Paul R. Bierman, David R. Montgomery, 2013-12-27 Written for introductory geomorphology courses, this textbook offers an

integrative applications centred approach to the study of the Earth's dynamic surface Bierman and Montgomery draw from the fields of physics chemistry biology and mathematics to help students get a basic understanding of Earth surface processes and the evolution of topography over short and long timescales The authors also hone in on practical applications showing how scientists are using geomorphological research to tackle critical societal issues natural disaster response safer infrastructure protecting species and more Exceptionally concise and community vetted each chapter is focused specifically on key concepts and underlying principles rather than regional or local examples The book's philosophy emerged from a National Academy of Sciences workshop on the future of the textbook and the table of contents was determined by over 60 geomorphologists gathered to identify core concepts and areas of common interest that future geomorphologists need to know

*Applied Geomorphology and Contemporary Issues* Sujit Mandal, Ramkrishna Maiti, Michael Nones, Heinz R. Beekedahl, 2022-09-04 The edited book deals with climate change and its response to river system which is one of the most burning issues of the Global environment Due to urbanization and industrialization land degradation and resource depletion are happening and promoting livelihood challenges in the world which is reflected in the book too The book addresses the construction of dams over large rivers and its possible consequences in the environment Changes of the hydrology and sedimentology are to be addressed in the book The climate change phenomena and associated geomorphic hazards and contemporary environmental issues such as sea level rise coastal flood drought wind erosion flood soil erosion landslide depletion of ground water coastal erosion etc are elaborated in the book with suitable methods and techniques So this edited book will contribute a lot to general to particular field of studies and will help to geographers geomorphologists environmentalists planners policy makers and developers for studies and promoting regional plans and development
