techniques with the help of precise procedures in the APOC library Use Neo4j advanced extensions and plugins for performance optimization Understand how Neo4j's new security features and clustering architecture are used for large scale deployments In Detail Neo4j is a graph database that allows traversing huge amounts of data with ease This book aims at quickly getting you started with the popular graph database Neo4j Starting with a brief introduction to graph theory this book will show you the advantages of using graph databases along with data modeling techniques for graph databases You'll gain practical hands on experience with commonly used and lesser known features for updating graph store with Neo4j's Cypher query language Furthermore you'll also learn to create awesome procedures using APOC and extend Neo4j's functionality enabling integration algorithmic analysis and other advanced spatial operation capabilities on data Through the course of the book you will come across implementation examples on the latest updates in Neo4j such as in graph indexes scaling performance improvements visualization data refactoring techniques security enhancements and much more By the end of the book you'll have gained the skills to design and implement modern spatial applications from graphing data to unraveling business capabilities with the help of real world use cases Style and approach A step by step approach of adopting Neo4j the world's leading graph database This book includes a lot of background information helps you grasp the fundamental concepts behind this radical new way of dealing with connected data and will give you lots of examples of use cases and environments where a graph database would be a great fit

[Mobile Security Products for Android](#) Philipp Kratzer, Christoph Gruber, Andreas Clementi, David Lahee, Philippe Rödlach, Peter Stelzhammer, 2014-10-14 We have once again tested security products for smartphones running Google's Android operating system Our report covers details of the products made by leading manufacturers Smartphones represent the future of modern communications In 2013 more than 1 billion smartphones were sold a further milestone in the advance of these devices¹ A study published by Facebook emphasises the importance of smartphones in our lives about 80% of users make use of their smartphone within 15 minutes of waking up each day At the same time the traditional function of a telephone is becoming less and less important The high quality of integrated cameras means that the smartphone is increasingly used for photography As well as with photos users trust their devices with their most personal communications such as Facebook WhatsApp and email This brings some risks with it as such usage makes the smartphone interesting for criminals who attempt to infect the device with malware or steal personal data There is also the danger brought by phishing attacks These days the use of security software on a PC or laptop is seen as essential However many smartphone users do not yet have the same sense of responsibility even though their devices store personal data private photos Internet banking information or even company data As modern smartphones are often expensive to buy they are also an attractive target for thieves Top quality smartphones cost several hundred Euros As it is not possible to physically prevent them from being stolen they must be made less attractive to thieves Consequently many of today's security products contain not only malware protection but also highly developed theft protection functions which

make the device less attractive to thieves e.g. by locking the device and help the owner to find it again E-Business and Telecommunications Mohammad S.
