

3. Marking points

3.1 Marking of lists

This applies to questions requiring a set number of responses, but for which students have provided extra responses. The general principle to be followed in such a situation is that 'right + wrong = wrong'.

Each error / contradiction negates each correct response. So, if the number of error / contradictions equals or exceeds the number of marks available for the question, no marks can be awarded.

However, responses considered to be neutral (indicated as * in example 1) are not penalised.

Example 1: What is the pH of an acidic solution?

[1 mark]

Student	Response	Marks awarded
1	green, 5	0
2	red*, 5	1
3	red*, 8	0

Example 2: Name two planets in the solar system.

[2 marks]

Student	Response	Marks awarded
1	Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune	0

3.2 Marking of short-answer questions / short-answer

For questions requiring a short-answer response, the whole response of a student is considered correct, but marks can be given for the correct response in a short-answer question. In the context of the question, each answer is considered.

3.3 Marking procedures for calculations

Students should be rewarded for each stage of the calculation completed correctly, as students can demonstrate their understanding of the calculation. For example, the student who gives the correct answer to a calculation question, without any working shown.

3.4 Interpretation of 0

Students using the word 'no' should be given credit only if it is clear that they do not know the correct answer.

Higher Biology 20marking Scheme
