Urocyon littoralis

As soon as the Santa Cruz island the population was fewer than 100, a 90 percent reduction in just a decade, largely due to predation by non-native golden eagles. The population was stabilized through captive breeding. The golden eagles were released to the mainland and native bald eagles were re-introduced to the island. The first foxes are believed to have come to the island more than 13,000 years ago, floating from the mainland on debris from megafaunal pairs. pups are born in late March through early May. Island foxes eat summer jelly, lizards, lizards, mice, small birds and sometimes insects.
