

Stoichiometry (Stoich)

12/04

Stoichiometry describes the method of measuring the elements of a chemical reaction.

This method allows you to determine how much of all the other chemicals you will need or can produce when you know anything about the amount of at least one chemical in the reaction.

You will definitely need a correct balanced equation in order to use this method, since it requires the use of mole ratios.

EXAMPLE:

If you burn 5.5 mol of C_2H_6 , how many mol of oxygen will you need to do this?

$$5.5 \text{ mol } \text{C}_2\text{H}_6 \left(\frac{7 \text{ mol } \text{O}_2}{2 \text{ mol } \text{C}_2\text{H}_6} \right) = 19.25$$

$$\downarrow$$

$19 \text{ mol } \text{O}_2$

* Remember to use correct # of sig figs when reporting your answer!

* cancel units to ensure your answer has the correct units

Oxide Surfaces, 2001-05-21 The book is a multi author survey in 15 chapters of the current state of knowledge and recent developments in our understanding of oxide surfaces. The author list includes most of the acknowledged world experts in this field. The material covered includes fundamental theory and experimental studies of the geometrical vibrational and electronic structure of such surfaces but with a special emphasis on the chemical properties and associated reactivity. The main focus is on metal oxides but coverage extends from simple rocksalt materials such as MgO through to complex transition metal oxides with different valencies.

Knowledge Spaces Jean-Claude Falmagne, Dietrich Albert, Christopher Doble, David Eppstein, Xiangen Hu, 2013-06-20 The book describes up to date applications and relevant theoretical results. These applications come from various places but the most important one numerically speaking is the internet based educational system ALEKS. The ALEKS system is bilingual English Spanish and covers all of mathematics from third grade to the end of high school and chemistry. It is also widely used in higher education because US students are often poorly prepared when they reach the university level. The chapter by Taagepera and Arasasingham deals with the application of knowledge spaces independent of ALEKS to the teaching of college chemistry. The four chapters by Albert and his collaborators strive to give cognitive interpretations to the combinatoric structures obtained and used by the ALEKS system. The contribution by Eppstein is technical and develops means of searching the knowledge structure efficiently.
