Part 1: Divergent Boundary

The diagram is of a divergent boundary with arrows showing the direction in which the plates are moving.

The scale lines are 10 km apart.

1. What is the age of the rocks at Location B?
0 years old 1 million years old 2 million years old 4 million years old
2. If each plate is moving at a rate of 10 km per 1 million years, roughly how long did it take for Rock A to reach its current location?
0 years 1 million years 2 million years 4 million years
3. What is the age of the rock at Location C?
0 years old 1 million years old 2 million years old 4 million years old
4. Why should your answer to Question 3 be twice your answer to Question 2? Revise your answers if necessary.
5. Where is the oldest ocean crust found? A B C
6. A map of the Atlantic Ocean is shown to the right. There is a divergent plate boundary running north-south in the middle of the ocean. Make a prediction: where are the oldest rocks in the Atlantic Ocean found?
D E
7. Two students are debating about the relative ages of the rocks that make up the crust in the Atlantic Ocean.

Student 1: The oldest rocks are located at E because it is the farthest from a continent. The rocks would take a really long time to get to the middle of the ocean.

Student 2: But this ocean has a divergent boundary in the center. This means that rocks at E are really young. D is farthest from the divergent boundary, so that's where the oldest rocks are.

With which student do you agree? Why?
