MorphoEvoDevo: A Multilevel Approach to Elucidate the Evolution of Metazoan Organ Systems ,2023-11-10 Analyzing animal development in a comparative framework provides a unique window into evolutionary history With a long tradition that dates back to iconic 19th century zoologists such as Ernst Haeckel and Charles Darwin Evolutionary Developmental Biology is firmly rooted in morphological research While studies using a classical model system approach have resulted in considerable methodological progress in particular by establishing molecular genetic tools to tackle questions surrounding animal development it quickly became obvious that a broad comparative dataset involving as many taxa as possible is necessary for sound evolutionary inferences Thus today s EvoDevo embraces morphological molecular and experimental procedures interpreted in a phylogenetic framework in order to answer key questions that revolve around the evolution of animal cell types organ systems and ultimately entire species **Contributions to International Conferences on**

Bench to Bedside: Translating Pre-clinical Research Into Clinical Trials for Childhood Brain Tumors, 2023-09-05

umors arising in the brain are the most common solid cancers in children They are the major cause of childhood cancer deaths Indeed more children die from brain tumors than any other disease Despite improvement in cure rates towards the end of the 20th century survival statistics have remained unchanged over the past two decades and remain at a level well below that of other childhood cancers such as leukemia Also survivors have a high risk of significant permanent adverse side effects that require a lifetime of clinical management significantly impacting health systems and quality of life for patients The lack of advancements in childhood brain tumor treatment was due to deficiencies in knowledge about the underlying biological causes However pediatric neuro oncology has undergone an exciting and dramatic transformation during the past 10 years driven by advances in genomic technology and international collaboration Armed with this new knowledge there is a tremendous opportunity to personalize the treatment by developing novel therapeutic approaches that are tailored to each molecular subtype of these devastating brain cancers to improve the cure rate while minimizing toxicities

Handbook of Immunohistochemistry and in Situ Hybridization of Human Carcinomas M. A. Hayat, 2005-01-31

Immunohistochemistry is the use of specific antibodies to stain particular molecular species in situ This technique has allowed the identification of many more cell types than could be visualized by classical histology particularly in the immune system and among the scattered hormone secreting cells of the endocrine system and has the potential to improve diagnosis prognosis and therapeutic options of cancer Handbook of Immunohistochemistry and in Situ Hybridization of Human Carcinomas discusses all aspects of immunohistochemistry and in situ hybridization technologies and the important role they play in reaching a cancer diagnosis It provides step by step instructions on the methods of additional molecular technologies such as DNA microarrays and microdissection along with the benefits and limitations of each method The topics of region specific gene expression its role in cancer development and the techniques that assist in the understanding of the molecular basis of disease are relevant and necessary in science today This book is the second volume of three planned individually sold volumes on this topic Like Volume 1 this book fully explains the principles and applications of modern techniques used in the field of molecular genetics It will be of particular interest to pathologists and molecular pathologists conducting both academic and or clinical research The only book available that translates molecular genetics into cancer diagnosis The results of each Immunohistochemical and in situ hybridization method are

presented in the form of color illustrations Methods discussed were either developed or refined by expert contributors in their own laboratories
