Child Bilingualism and Second Language Learning Fangfang Li, Karen E. Pollock, Robbin Gibb, 2020-11-15 This book focuses exclusively on child bilinguals or children exposed to a second language in various learning contexts. Through the presentation of research on how children learn the sound systems or lexicon in two languages and via different routes, the book aims to paint a comprehensive picture of child bilingualism and second language learning. In addition, the book features contributions focused on theoretical overviews and methodological approaches. Researchers from diverse disciplines such as linguistics, psychology, and speech language pathology contributed to the book, thus representing an effort to integrate multiple views and perspectives. The book is useful for researchers, clinicians, and educators who work with children acquiring or learning a second language in different settings. It should also be of interest to university students studying bilingualism and/or second language acquisition or parents raising bilingual children.

Language Disorders in Bilingual Children and Adults, Third Edition Kathryn Kohnert, Kerry Danahy Ebert, Giang Thuy Pham, 2020-08-26 *Language Disorders in Bilingual Children and Adults, Third Edition* provides speech language pathologists, advanced students in communication disorders programs, and clinical language researchers with information needed to formulate and respond to questions related to effective service delivery to bilingual children and adults with suspected or confirmed language disorders. The bilinguals of interest represent varying levels of first and second language proficiency across the lifespan. That is, bilingualism is not determined here by proficiency in each language but rather by the individual's experience or need for two languages. In separate chapters, the book synthesizes the literature on bilingual children and adults with typical and atypical language skills. These chapters give the reader a deep understanding of the multiple factors that affect language development and disorders in those who rely on two languages for meaningful interactions. Chapters on assessment and intervention issues and methods are then presented for each population. For children, the text focuses on developmental language disorder but also discusses secondary language disorders such as autism spectrum disorder in bilingual populations. For adults, the focus is on aphasia with additional discussion of dementia, traumatic brain injury, and right hemisphere disorder. Although child and adult typical and atypical populations are presented separately, all are considered within a unifying Dynamic Interactive Processing perspective and within a new Means-Opportunities-Motives framework for understanding language disorders in bilinguals. This broad theoretical framework emphasizes interactions between social, cognitive, and communicative systems to form the basis for very practical implications related to assessment and intervention. This third edition has been completely updated to reflect the current research on bilingual populations and the best practices for working with them. Studies at the intersection of bilingualism and language disorders have expanded to include additional disorders and new language combinations. The

authors synthesize the current literature and translate it for clinical use New to the Third Edition Coauthors Kerry Danahy Ebert PhD CCC SLP and Giang Thuy Pham PhD CCC SLP Updated literature review and references to reflect new research on bilingualism cultural competence cognitive advantages and clinical practice with linguistically diverse populations Case studies on assessment with bilingual children and adults Additional tables and figures summarizing key information Available evidence on additional child and adult language disorders in bilinguals Updated extension activities and resource supplement
