Handbook of Historical Ecology and Applied Archaeology Christian Isendahl, Daryl Stump, 2019-01-10 The Oxford Handbook of Historical Ecology and Applied Archaeology presents theoretical discussions, methodological outlines and case studies describing the field of overlap between historical ecology and the emerging sub-discipline of applied archaeology to highlight how modern environments and landscapes have been shaped by humans. Historical ecology is based on the recognition that humans are not only capable of modifying their environments but that all environments on earth have already been directly or indirectly modified. This includes anthropogenic climate change, widespread deforestation and species extinctions but also very local alterations the effects of which may last a few years or may have legacies lasting centuries or more. With contributions from anthropologists, archaeologists, human geographers and historians, this volume focuses not just on defining human impacts in the past but on the ways that understanding these changes can help inform contemporary practices and development policies. Some chapters present examples of how ancient or current societies have modified their environments in sustainable ways while others highlight practices that had unintended long term consequences. The possibilities of learning from these practices are discussed as is the potential of using the long history of human resource exploitation as a method for building or testing models of future change. The volume offers overviews for students, researchers and professionals with an interest in conservation or development projects who want to understand what practical insights can be drawn from history and who seek to apply their work to contemporary issues. Landscapes create people's identities and guide their actions and their preferences while at the same time are shaped by the actions and forces of people. Food as currency medium and sustenance is a fundamental part of those landscape relationships. This volume brings together over fifty contributors from around the world in forty profoundly interdisciplinary chapters. Chapter authors represent an astonishing range of disciplines from agronomy anthropology archaeology conservation countryside management cultural studies ecology ethics geography heritage studies landscape architecture landscape management and planning literature urban design and architecture. Both food studies and landscape studies defy comprehension from the perspective of a single discipline and thus such a range is both necessary and enriching. The Routledge Handbook of Landscape and Food is intended as a first port of call for scholars and researchers seeking to undertake new work at the many intersections of landscape and food. Each chapter provides an authoritative overview a broad range of pertinent readings and references and seeks to identify areas where new research is needed though these may also be identified in the many fertile areas in which subjects and chapters overlap within the book.

Peterson Reference Guide to Sparrows of North America Rick Wright (Bird tour leader), 2019 Sparrows are as complicated as they are common. This is an essential guide to identifying 76 kinds along with a fascinating history of human interactions with them. What exactly is a sparrow? All birders and many non birders have essentially the same mental image of a pelican a duck or a flamingo and a guide dedicated to waxwings or kingfishers would need nothing more than a sketch and a single sentence to satisfactorily identify its subject. Sparrows are harder to pin down. This book covers one family Passerellidae which includes towhees and juncos and 76 members of the sparrow clan. Birds have a human history too beginning with their significance to native cultures and continuing through their discovery by science their taxonomic fortunes and misfortunes and their prospects for survival in a world with ever less space for wild creatures. This book includes not just facts and measurements but stories of how birds got their names and how they were discovered of their entanglement with human history.
