Queen's University Belfast Apparently John Bell who had been interested in the Bohr-Einstein dialogue always took the position of Albert Einstein on philosophical issues He also felt that a completion of quantum mechanics using so-called hidden variables would be highly desired as it would help to regain a realistic and objective picture of the world That way Bell hoped one would be able to arrive at a physics where measurement would not play such a central role as in the Copenhagen interpretation of quantum mechanics Then a most interesting sequence of events set in In 1952 David Bohm had achieved something which had earlier been proclaimed impossible It had been proved by John von Neumann that no hidden variable theory could agree with quantum mechanics Bohm actually formulated such a theory where each particle at any time has both a well-defined position and a well-defined momentum The conflict raised between von Neumann and Bohm was elegantly resolved by Bell who showed that von Neumann's proof contained a physically unjustifiable assumption So while John Bell had flung open the door widely for hidden variable theories he immediately dealt them a major blow In 1964 in his celebrated paper On the Einstein-Podolsky-Rosen Paradox he showed that any hidden variable theory which obeys Einstein's requirement of locality is
