**Problem 20D****CURRENT IN AND POTENTIAL DIFFERENCE ACROSS A RESISTOR****PROBLEM**

For the circuit from the previous section's sample problem, determine the current in and potential difference across the  $8.0\ \Omega$  resistor ( $R_4$ ) in the figure below.

**REASONING**

First find the equivalent resistance of the circuit. From this, determine the total circuit current. Then rebuild the circuit in steps, calculating the current and potential difference for the equivalent resistance of each group until the current in and potential difference across the specified  $8.0\ \Omega$  resistor are known.

**SOLUTION****1. Determine the equivalent resistance of the circuit.**

The equivalent resistance, which was calculated in the sample problem of the previous section, is  $5.9\ \Omega$ .

**2. Calculate the total current in the circuit.**

Substitute the potential difference and equivalent resistance in  $\Delta V = IR$ , and rearrange the equation to find the current delivered by the battery.

$$I = \frac{\Delta V}{R_{eq}} = \frac{(12.0\text{ V})}{(5.9\ \Omega)} = 2.0\text{ A}$$

**3. Determine a path from the equivalent resistance found in step 1 to the specified resistor.**

Review the path taken to find the equivalent resistance in the diagram below, and work backward through this path. The equivalent resistance for the entire circuit is the same as the equivalent resistance for group (c). The top resistors in group (c), in turn, form the equivalent resistance for group (b), and the rightmost resistor in group (b) is the specified  $8.0\ \Omega$  resistor.

Russia Yvonne Howell, Nikolai Kremmentsov, 2021-12-02 The idea that morally mentally and physically superior new men might  
replace the currently existing mankind has periodically seized the imagination of intellectuals leaders and reformers  
throughout history This volume offers a multidisciplinary investigation into how the new man was made in Russia and the  
early Soviet Union in the first third of the 20th century The traditional narrative of the Soviet new man as a creature forged  
by propaganda is challenged by the strikingly new and varied case studies presented here The book focuses on the interplay  
between the rapidly developing experimental life sciences such as biology medicine and psychology and countless cultural  
products ranging from film and fiction dolls and museum exhibits to pedagogical projects sculptures and exemplary  
agricultural fairs With contributions from scholars based in the United States Canada the UK Germany and Russia the  
picture that emerges is emphatically more complex contradictory and suggestive of strong parallels with other new man  
visions in Europe and elsewhere In contrast to previous interpretations that focused largely on the apparent disconnect  
between utopian new man rhetoric and the harsh realities of everyday life in the Soviet Union this volume brings to light the  
surprising historical trajectories of new man visions their often obscure origins acclaimed and forgotten champions  
unexpected and complicated results and mutual interrelations In short the volume is a timely examination of a recurring  
theme in modern history when dramatic advancements in science and technology conjoin with anxieties about the future to  
fuel dreams of a new and improved mankind
