

Hyperion Financial Management: Performance Tuning Guide

For comprehensive tuning information for the PM System, please refer to the Oracle® Hyperfine PM, Fusion Edition Performance and Tuning Guide. Top of Document This document is written for people who monitor performance and tune the components in an PM/BI environment. It is assumed that readers know server administration and hardware performance tuning fundamentals, web servers, java application servers and database.

Introduction to Oracle Hyperfine PM System Performance

To maximize Oracle Hyperfine PM System performance, you need to monitor, analyze, and tune all the components. This guide describes the tools that you can use to monitor performance and the techniques for optimizing the performance of Oracle Hyperfine PM System components, for example Financial Management, Sybase, Reporting and Analysis and Planning. Performance Terminology This guide uses the following performance terms: Scalability The system's ability to perform within specification under increasing user load, data load and hardware expansion. Latency The time between the issuing of a request and the time when the work actually begins on the request. Think time The time a real user pauses to think between actions.

Resource utilization A consumption metric, for example, the percent of CPU usage. Response time A time metric, for example round-trip time it takes the server to deliver a Web page. Throughput A rate metric (requests per unit of time), for example, requests per second, bits per second. For example, if an application can handle 20 customer quests simultaneously and each request takes one second to process, this site has a potential throughput of 20 requests per second. Understanding Key Performance Drivers To optimize your deployment, you must understand the elements that influence performance and scalability.

A factor that dictates performance is called a key performance driver. Knowing how the drivers behave in combination further enhances your ability to deploy Oracle Hyperfine PM system optimally, based on the unique requirements of each deployment. Hardware Capacity - Factors such as number of servers, quantity and speed of processors, available RAM, network speed etc. Technical Platforms Tuning - Fine tuning other third party software required for installing and running Oracle Hyperfine PM products; for example: relational databases, java application servers, Web servers, Server / Client Operating System and browsers.

Business Application Design - Application design is an important factor in system performance I. E. Structure, size, and use of product features in designing applications' databases, reports, Web data entry forms, calculations and consolidations. Business Process usage - Activities carried out by users in the normal flow of your business cycle. Business process usage has three components:
