Handbook of Research on K-12 Blended and Virtual Learning Through the i²Flex Classroom Model Avgerinou, Maria D.,Pelonis, Peggy,2021-03-05 Teaching models

that focus on blended and virtual learning have become important during the past year and have become integral for the continuance of learning. The i Flex classroom model, a variation of blended learning, allows non-interactive teaching activities to take place without teachers' direct involvement, freeing up time for more meaningful teacher-student and student-student interactions. There is evidence that i Flex leads to increased student engagement and motivation as well as better exploitation of teachers and classroom time, leading to the development of higher-order cognitive skills as well as study skills for students' future needs related to citizenship, college, and careers.

The Handbook of Research on K-12 Blended and Virtual Learning Through the i Flex Classroom Model focuses not only on how to design, deliver, and evaluate courses but also on how to assess teacher performance in a blended i2Flex way at the K-12 level. The book will discuss the implementation of the i Flex isquareFlex, a non-traditional learning methodology which integrates internet-based delivery of content and instruction with faculty-guided student-independent learning in combination with face-to-face classroom instruction, aiming at developing higher-order cognitive skills within a flexible learning design framework. While highlighting new methods for improving the classroom and learning experience in addition to preparing students for higher education and careers, this publication is an essential reference source for pre-service and in-service teachers, researchers, administrators, educational technology developers, and students interested in how the i2Flex model was implemented in classrooms and the effects of this learning model.

Pressing Forward Kathryn M. Borman, Becky Smerdon, 2012-04-01. Pressing Forward: Increasing and Expanding Rigor and Relevance in America's High Schools is organized to place secondary education specifically, the goals of preparing young adults to be college and career ready in contemporary perspective, emphasizing the changing global economy and trends in policy and practice. High school students must be equipped with tools they need during and beyond high school for mapping their futures in a global and flat world that demands workers prepared to take up 21st-century careers. Following Thomas Friedman and other writers on the topic, this book takes as its core premise that the world has been irrevocably altered by technology and that technology takes a prominent role in shaping post-secondary education and career opportunities. The challenges facing education and educators in a flattened world can best be addressed by creating opportunities for students who are ready for a world in which they are expected to pursue learning throughout their lifetimes, understand and use technology, engage in active civic lives, function well in ethnically diverse workplace settings, and be willing to take risks. Most of all, however, these individuals must be very well prepared during high school by taking advanced-level mathematics, science, and other challenging coursework while at the same time actively engaging in collaborative, creative endeavors that prepare them to continuously reinvent themselves to stay ahead of automation and outsourcing. The book will be a unique and useful contribution to the education reform and policy literature as it examines secondary education at an historical moment: the convergence of significant education spending and focus on high school reform. Developed from diverse authors' research programs on secondary education, the chapters in this volume highlight both

changing and steadfast features of high schools questioning if attempts to foster change whether tinkering around the edges or inventing a new way adequately address shortcomings in equity and excellence found in American high schools The AKSZ Construction in Derived Algebraic Geometry as an Extended Topological Field Theory Damien Calaque, Rune Haugseng, Claudia Scheimbauer, 2025-05-29 View the abstract

Price,2021 This book walks readers through the stages of the high school college prep pipeline that introduces interlocked structural barriers to students The author shows how these barriers reinforce segregated structures that unfairly distribute the public good of education to some students and not others Price argues that the college prep pipeline of Advanced Placement and International Baccalaureate coursework in American high schools constitutes a new form of tracking in the 21st century Even further this new tracking introduces a facade of college readiness that veils the unequal learning opportunities that send some students out into the college world with pockets full of counterfeit credentials that serve only to reinforce the historically oppressive system Whether intentional or not this new form of tracking is embedded in schools across the United States and have lifetime consequences for individual students that reinforce historically racial ethnic and spatial inequalities This book is a rigorous and engaging portrait of the architecture of opportunity in American schools With a fine grained analysis that never loses sight of the big picture Heather Price reveals structural realities of college readiness in the United States that are ripe for change Sean Kelly University of Pittsburgh
