Kearns, Timothy J. Mavin, Steven Hodge, 2017-05-15 Whether a trainee is studying air traffic control piloting maintenance engineering or cabin crew they must complete a set number of training hours before being licensed or certified The aviation industry is moving away from an hours based to a competency based training system Within this approach training is complete when a learner can demonstrate competent performance Training based on competency is an increasingly popular approach in aviation It allows for an alternate means of compliance with international regulations which can result in shorter and more efficient training programs However there are also challenges with a competency based approach The definition of competency based education can be confusing training can be reductionist and artificially simplistic professional interpretation of written competencies can vary between individuals and this approach can have a high administrative and regulatory burden *Competency Based Education in Aviation Exploring Alternate Training Pathways* explores this approach to training in great detail considering the four aviation professional groups of air traffic control pilots maintenance engineers and cabin crew Aviation training experts were interviewed and have contributed professional insights along with personal stories and anecdotes associated with competency based approaches in their fields Research based and practical strategies for the effective creation delivery and assessment of competency based education are described in detail

longer time for discussion or analysis only safety first action This book aims at the assurance of better outcomes from these time critical situations whose genesis lies in the time period immediately preceding the last minute This assurance of better outcomes can best be assured by enabling operational managers to adopt new paradigms in the development of SOPs building the right culture and implementation of training programs relevant to good decision making required as the last minute approaches This book examines the development of the foundations for aviation safety the things that give foundational support for safety to pilots in particular but over which line pilots may have little knowledge or day to day control It provides a history of time critical safety related events providing the foundation for the understanding of the reasons why pilot inactivity indifference fixation and incapacitation can so pervade the lead up to the last minute as to leave the safe continuation of the flight resting on prompt remedial action The role of doubt how it is expressed and how it is heard is another central thread Finally the book addresses the role of flight data analysis as a valuable management tool Written for aviation managers line flight crews and those in similar operational roles in aviation related operations this book and its informal discussion style should appeal and communicate across national age experience and language boundaries to create a safer operational environment Handbook of Human Factors in Air Transportation Systems Steven James
