**Metrics of Sensory Motor Coordination and Integration in Robots and Animals** Fabio Bonsignorio, Elena Messina, Angel P. del Pobil, John Hallam, 2019-03-23 This book focuses on a critical issue in the study of physical agents: whether natural or artificial, the quantitative modelling of sensory motor coordination. Adopting a novel approach, it defines a common scientific framework for both the intelligent systems designed by engineers and those that have evolved naturally. As such, it contributes to the widespread adoption of a rigorous quantitative and refutable approach in the scientific study of embodied intelligence and cognition. More than 70 years after Norbert Wiener's famous book *Cybernetics or Control and Communication in the Animal and the Machine* (1948), robotics, AI, and life sciences seem to be converging towards a common model of what we can call the science of embodied intelligent cognitive agents. This book is interesting for an

interdisciplinary community of researchers technologists and entrepreneurs working at the frontiers of robotics and AI  
neuroscience and general life and brain sciences
