traditional testing are no longer adequate to equip our students with the skills they need to excel in the global economy. Instead, teachers need to engage students in deeper learning, assessing their ability to use higher order skills. Skills like synthesizing information, understanding evidence, and critical problem solving are not achieved when we teach to multiple choice exams. Examples in *Beyond the Bubble Test* paint a useful picture of how schools can begin to supplement traditional tests with something that works better. This book provides new perspectives on current performance assessment research, plus an incisive look at what's possible at the local and state levels. Linda Darling Hammond, with a team of leading scholars, bring together lessons learned, new directions, and solid recommendations into a single, readily accessible compendium. *Beyond the Bubble Test* situates the current debate on performance assessment within the context of testing in the United States. The Commander-in-Chief Test Jeffrey A. Friedman, 2023-12-15 In *The Commander in Chief Test* Jeffrey A Friedman offers a fresh explanation for why Americans are often frustrated by the cost and scope of US foreign policy and how we can fix that for the future Americans frequently criticize US foreign policy for being overly costly and excessively militaristic With its rising defense budgets and open ended forever wars US foreign policy often appears disconnected from public opinion reflecting the views of elites and special interests rather than the attitudes of ordinary citizens The Commander in Chief Test argues that this conventional wisdom underestimates the role public opinion plays in shaping foreign policy Voters may prefer to elect leaders who share their policy views but they prioritize selecting presidents who seem to have the right personal attributes to be an effective commander in chief Leaders then use hawkish foreign policies as tools for showing that they are tough enough to defend America's interests on the international stage This link between leaders policy positions and their personal images steers US foreign policy in directions that are more hawkish than what voters actually want Combining polling data with survey experiments and original archival research on cases from the Vietnam War through the occupations of Iraq and Afghanistan Friedman demonstrates that public opinion plays a surprisingly extensive and often problematic role in shaping US international behavior With the commander in chief test a perennial point of debate in national elections Friedman's insights offer important lessons on how the politics of image making impacts foreign policy and how the public should choose its president
