New Strategies for Financial Services Firms Dennis Kundisch,2012-12-06 The theme of this book New strategies for financial services providers is an equally relevant and important topic in science and practice In the post information age economy the German financial services market and many big financial services providers are in a deep crisis Increasing competition due to deregulation and

improved transparency through new means of communication on the one hand and empowered customers demanding individualized solutions for their financial problems e.g. because of new working circumstances increase the pressure on the market participants to alter their strategies according to these new challenges. Many firms have reacted defensively either by merging in the hopes of realizing scale effects a high risk venture considering the last few years or by adapting me too strategies also known as lemming banking that do not provide for a sustainable competitive advantage. Based on a profound analysis of developing mega trends in the years ahead especially in information and IT intense market Dr Kundisch develops a new anti cyclical strategy that aims at using IT as an enabler to strengthen customer relationships and focus on individualized solutions wherever it seems economically sound to do so. However he does not stop after the development of the strategy but provides two important concepts that may help turn this vision and strategy into reality. Thus he favorably and refreshingly differentiates against many contributions that stop at the fairly abstract strategic level.
