The holistic approach is organised into the following sections: Conceptualising, Designing, Social Media Research, Collection, Storage, Qualitative Approaches to Social Media Data, Quantitative Approaches to Social Media Data, Diverse Approaches to Social Media Data, Analytical Tools, Social Media Platforms. This handbook is the single most comprehensive resource for any scholar or graduate student embarking on a social media project. **Corpus Approaches**

**to Language in Social Media** Matteo Di Cristofaro, 2023-08-18. This book showcases the unique possibilities of corpus linguistic methodologies in engaging with and analysing language data from social media, surveying current approaches and offering guidelines and best practices for doing language analysis. The book provides an overview of how language in social media has been approached by linguists and non linguists before delving into the identification of the datasets requirements needed to pursue investigations in social media and of the technical aspects of particular platforms that may influence the analysis such as emoticons, retweets and metadata. Sample Python code along with general guidelines for using it is provided to empower researchers to apply these techniques in their own work supported by actual examples from three real life case studies. Di Cristofaro highlights the full potential of using these methodologies in analysing social media language data and the ways in which they might pave the way for future applications of data analysis and processing for corpus linguistics. The book will be key reading for researchers in corpus linguistics and linguists and social scientists interested in data driven analysis of social media. environmental humanities and amateur cinema studies exploring tourism induced environmental issues through the visual representations created by tourists themselves. The protagonists of the book are families from North West Italy and their holiday films captured during their holidays in the Ligurian Riviera. The timeframe spans between the 1950s and 1970s, the so called Italian economic miracle, a period in which Italy experienced an extraordinary and rapid economic growth and consequentially a rise in living standards including tourism and film cameras accessibility. Radical environmental transformations such as the industrialization and cementing of spaces or the conversion of entire coastlines into territories

equipped to receive masses of tourists were just one of the consequences studied from a myriad of sources but never through amateur films. The most illustrative case is the Ligurian Riviera which has been regarded as an example of land consumption since those contemporary years. Despite being centered on a specific case study, readers will be equipped with practical tools to enhance their study of historical amateur films. These tools are introduced through innovative methodological approaches to archival research and visual analysis. The results will highlight the visual imagery of mid 20th century tourists and their perspectives on the destinations they visited, offering fresh visually oriented insights that contribute to the field of tourism studies. As a visual journey through mid 20th century Italian tourism and its environmental narratives, it may interest cultural geographers, tourism and media scholars, and the broader group of environmental humanists; the latter will have the opportunity to explore amateur cinema as an untapped resource for understanding cultural narratives, while amateur cinema scholars will have an example of a fresh and different approach to their subject. It can also give new insights to archivists specialized in home movies and be appealing to scholars and intellectuals interested in these topics.

**Machine Learning and Artificial Intelligence** A.J. Tallón-Ballesteros, C.-H. Chen, 2020-12-15. Machine learning and artificial intelligence are already widely applied to facilitate our daily lives as well as scientific research, but with the world currently facing a global COVID 19 pandemic, their capacity to provide an important tool to support those searching for a way to combat the novel corona virus has never been more important. This book presents the proceedings of the International Conference on Machine Learning and Intelligent Systems MLIS 2020, which was due to be held in Seoul, Korea, from 25-28 October 2020 but which was delivered as an online conference on the same dates due to COVID 19 restrictions. MLIS 2020 was the latest in a series of annual conferences that aim to provide a platform for exchanging knowledge about the most recent scientific and technological advances in the field of machine learning and intelligent systems. The annual conference also strengthens links within the scientific community in related research areas. The book contains 53 papers selected from more than 160 submissions and presented at MLIS 2020. Selection was based on the results of review and scored on originality, scientific practical significance, compelling logical reasoning, and language. Topics covered include data mining, image processing, neural networks, human health, natural language processing, video processing, computational intelligence, expert systems, human computer interaction, deep learning, and robotics. Offering a current overview of research and developments in machine learning and artificial intelligence, the book will be of interest to all those working in the field.
