Differential Equations: Numerical Solutions in C and Python Ed Bueler,2020-10-22 The Portable Extensible Toolkit for
Scientific Computation PETSc is an open source library of advanced data structures and methods for solving linear and
nonlinear equations and for managing discretizations This book uses these modern numerical tools to demonstrate how to
solve nonlinear partial differential equations PDEs in parallel It starts from key mathematical concepts such as Krylov space
methods preconditioning multigrid and Newton s method In PETSc these components are composed at run time into fast
solvers Discretizations are introduced from the beginning with an emphasis on finite difference and finite element
methodologies The example C programs of the first 12 chapters listed on the inside front cover solve mostly elliptic and
parabolic PDE problems Discretization leads to large sparse and generally nonlinear systems of algebraic equations For such
problems mathematical solver concepts are explained and illustrated through the examples with sufficient context to speed
further development PETSc for Partial Differential Equations addresses both discretizations and fast solvers for PDEs
emphasizing practice more than theory Well structured examples lead to run time choices that result in high solver
performance and parallel scalability The last two chapters build on the reader s understanding of fast solver concepts when
applying the Firedrake Python finite element solver library This textbook the first to cover PETSc programming for nonlinear
PDEs provides an on ramp for graduate students and researchers to a major area of high performance computing for science
and engineering It is suitable as a supplement for courses in scientific computing or numerical methods for differential
equations
