

Investigating Frog Anatomy

Introduction

Frogs are typical amphibians, adapted to live in water and on land. The organization of an adult frog's internal organs is similar to the internal organization of other vertebrates that live on land. Its small size makes it easy to study. In this investigation you will dissect an adult frog and observe structures that make the frog adapted to its environment.

Problem

What are some features of a frog's anatomy that help it adapt to its environment?

Pre-Lab Discussion

Read the entire investigation. Then, work with a partner to answer the following questions.

1. What will you examine in Part A of this investigation?

2. Why is it important to make shallow cuts when cutting the skin around the frog's hindlimb?

3. After you expose the internal organs in Part B, what two structures might you have to remove in order to examine the organs?

4. Which organs of the digestive system will you identify in Part C?

5. Without the presence of eggs, how will you know whether your frog is male or female?

Materials *(per pair)*

plastic gloves
preserved frog
paper towels
dissecting tray
dissecting scissors

dissecting probes
