Isolation Exercises This book wouldn t be complete without some isolation exercises Isolation exercises are those that involve only one joint and a limited number of muscle groups Isolation allows you to focus more and go heavier A good example is an exercise that is performed standing up standing up will require more muscle recruitment whereas a laying down exercise will take out all those muscles that were required to stand up i e calves quadriceps gluteals erector spinae and many more

Multi planar Exercises The exercises listed in this category are not the only multi planar exercises there are many more a good example of a popular multi planar exercise not listed here is the kettlebell snatch The reason the exercises are listed under this category is that there was not one parent exercise category under which they fall In basic terms multi planar exercises are those that go up down back to the side etc they move through multiple planes of movement in one rep A good example of a non multi planar exercise is the shoulder press Note whether an exercise is or isn t multi planar doesn t make it a bad or good exercise it just describes that it goes through multiple planes of movement
