On Fact and Fraud David Goodstein, 2010-02-01 Fascinating case studies of scientific controversies and misconduct with valuable insights on how to identify avoid and prevent fraud

Leonardo In David Goodstein's varied experience as a physicist and educator and as vice provost at Caltech a job in which he was responsible for investigating all allegations of scientific misconduct a deceptively simple question has come up time and again What constitutes fraud in science Here Goodstein takes us on a tour of real controversies from the front lines of science and helps readers determine for themselves whether or not fraud occurred Cases include among others those of Robert A Millikan whose historic measurement of the electron's charge has been maligned by accusations of fraud Martin Fleischmann and Stanley Pons and their discovery of cold fusion Victor Ninov and the supposed discovery of element 118 Jan Hendrik Sch n from Bell Labs and his work in semiconductors and J Georg Bednorz and Karl M ller's discovery of high temperature superconductivity a seemingly impossible accomplishment that turned out to be real Fraud in science is not as easy to identify as one might think When accusations of scientific misconduct occur truth can be elusive and the cause of a scientist's ethical misstep isn't always clear On Fact and Fraud looks at actual cases in which fraud was committed or alleged explaining what constitutes scientific misconduct and what doesn't and providing readers with the ethical foundations needed to discern and avoid fraud wherever it may arise Superb It will be the definitive book on the subject Richard A Muller University of California Berkeley
