Forensic Science A To Z Challenge Key:

Challenges in Detection Approaches for Forensic Science Lynn Dennany, 2021-04-13 Forensic science combines analytical science with the requirements of law enforcement agencies and legislation. This can often pose challenges within the development of novel analytical methods, particularly with the drive to have more in-field and in-situ applications to facilitate the investigation of criminal cases. This book will explore the specific challenges encountered by forensic scientists and the developments that are being made to address these within the framework of the legislative requirements. It will provide a critical appraisal of the current challenges facing analytical approaches for the detection of forensic evidence and the state of the art technologies used to address these challenges. Providing an excellent combination of current research and how this pertains to forensic investigations, the book will also highlight key obstacles within this ever-changing environment. Aimed at graduates and forensic professionals, this is a unique oversight of the current work being undertaken within the development of analytical methods and also in the interpretation of complex crime scene samples.

Law and Neuroscience: Justice as a Challenge for Neurorights, Neurolaw, and Forensic Psychology Eric García-López, Eduardo Demetrio Crespo, Cristina Nombela Otero, Federica Coppola, 2025-05-29 Justice is one of the most complex issues in the study of Law. Philosophical, sociological, and religious studies have attempted to articulate this value central to human coexistence throughout history. More recently, specialised sub-disciplines such as Legal Psychology have significantly contributed to refining the relationship between Law and Justice by enriching the study of these normative domains with empirical knowledge about social interactions. In more recent developments, the discipline of Neurolaw has begun to offer new insights into the analysis of the longstanding and disputed issues surrounding Law and Justice. Neurolaw can be defined as the analysis of Law and Justice from the perspective of Neuroscience and involves an understanding of human behavior through the study of the brain's interactions with the environment. Neuroscience appears to provide a more up-to-date understanding of human behavior focussing on the legal and forensic implications. Yet, neuroscientific studies of crime fail to grasp the impact of broader socio-contextual contingencies on human conduct, including institutional failures, gender dynamics, and cultural power. Such a failure evidences the limits of neuroscience as a complete epistemological tool. It is too narrow to provide a complete understanding of complex human conduct like crime as it involves a careful examination of the variegated interactions between various social and biological levels. This Research Topic addresses the need for developing a holistic theoretical framework that considers not only the biological nature of human beings but also the social, cultural, and political influences on human behavior. Such a holistic approach is necessary to clarify some foundational philosophical questions, including subjectivity and consciousness, as well as the role that these concepts play within the notion of criminal liability and punishment. In addition to these unresolved philosophical questions, there is also the need for a revised legal and forensic approach that grasps a more nuanced and complex understanding of human conduct. Topics for contributions include but are

not limited to the following Neuroscience Law and Criminal Justice Neuroscience Law and Social Justice Neuroscience Law and Racial Justice Neuroscience and Restorative Justice Neurorights Neuroethics Criminal responsibility Decision making Juvenile Criminal Law and Punishment Free will Ethical legal and social repercussions of the neurotechnologies currently available as well as of those that are currently being developed We welcome submissions from authors with backgrounds in law justice philosophy forensic neuropsychology forensic cognitive social psychology forensic psychiatry criminology sociology addressing theoretical methodological or empirical issues related to these topics and other related ones Cross inter and multidisciplinary contributions are of course welcome
