Data Intensive Computing Applications for Big Data M. Mittal, V.E. Balas, D.J. Hemanth, 2018-01-31
The book *Data Intensive Computing Applications for Big Data* discusses the technical concepts of big data, data-intensive computing, machine learning, soft computing, and parallel computing paradigms. It brings together researchers to report their latest results or progress in the development of the above-mentioned areas. Since there are few books on this specific subject, the editors aim to provide a common platform for researchers working in this area to exhibit their novel findings. The book is intended as a reference work for advanced undergraduates and graduate students as well as multidisciplinary, interdisciplinary, and transdisciplinary research workers and scientists on the subjects of big data and cloud, parallel, and distributed computing and explains didactically many of the core concepts of these approaches for practical applications. It is organized into 24 chapters providing a comprehensive overview of big data analysis using parallel computing and addresses the complete data science workflow in the cloud as well as dealing with privacy issues and the challenges faced in a data-intensive cloud computing environment. The book explores both fundamental and high-level concepts and will serve as a manual for those in the industry while also helping beginners to understand the basic and advanced aspects of big data and cloud computing.
