

CRCT Science Study Guide

LIFE SCIENCE (40%)

CELLS

- All living things are made up of tiny cells, which can only be seen under a microscope.
- Cells are made up of smaller parts, called organelles, all of which have specific functions to help the cell grow, carry out life functions, and reproduce.
- There are two types of cells
 - Plant Cells
 - Animal Cells
- Plant cells have **CHLOROPLASTS** that help the plant by chemically changing sunlight, nutrients, and carbon dioxide into oxygen and food for the plant. The extra oxygen is released into the air, and animals use it to breathe.
- Plants also have **CELL WALLS** which give the plant support and structure.
- **ALL** cells have the following organelles:

- Cell membrane-allows nutrients to flow in and wastes to flow out
- Nucleus-controls all the functions of the cell
- Cytoplasm-jelly-like substance in which the organelle float
- Mitochondria-provide the cell with energy
- Be able to identify these in a diagram of an animal cell and a plant cell
- **MULTICELLED ORGANISMS**-have more than one cell.
 - Cells are specialized to do specific jobs
 - Like cells group together to form tissues
 - Like tissues form organs
 - Organs group together to form organ systems
- **UNICELLULAR ORGANISMS**-are made up of only one cell
 - They do not specialize, but function independently

MICROORGANISMS

- Living things that are too small to be seen without a magnifying glass
- Can be single-celled or multi-celled
- Includes:
 - Bacteria
 - Protists
 - Fungi
- Some microbes are helpful to humans
 - They help you digest your food
 - They fight off bad microbes
