Mapping Biology Knowledge K. Fisher,J.H. Wandersee,D.E. Moody,2006-04-11 Mapping Biology Knowledge addresses
two key topics in the context of biology promoting meaningful learning and knowledge mapping as a strategy for achieving
this goal Meaning making and meaning building are examined from multiple perspectives throughout the book In many
biology courses students become so mired in detail that they fail to grasp the big picture Various strategies are proposed for
helping instructors focus on the big picture using the need to know principle to decide the level of detail students must have
in a given situation The metacognitive tools described here serve as support systems for the mind creating an arena in which
learners can operate on ideas They include concept maps cluster maps webs semantic networks and conceptual graphs These
tools compared and contrasted in this book are also useful for building and assessing students content and cognitive skills
The expanding role of computers in mapping biology knowledge is also explored Family Life and Sex Education Lois B.
