

I THE ORGANIZATION AND STRUCTURE OF THE HUMAN BODY

The human body is made up of a complex structure of systems that all work together. There are several levels of organization to this structure, with each level more complex than the last.

Nervous system

Neuron

Cells

Cells are the basic building blocks of the human body. Although all human cells share some basic characteristics, they can vary greatly based on their specialized functions. For example, nerve cells—also known as neurons—communicate with each other through electrochemical signals. Other examples of specialized cells found in the human body include muscle cells and blood cells.

Muscular system

Muscle fibers

Tissues

Together, groups of specialized cells form tissue. There are four basic types of tissue in the human body: muscle tissue, nervous tissue, connective tissue, and epithelial tissue. Muscle tissue might be the first thing that comes to mind when thinking about body tissue, but blood and bone are considered tissue as well—in this case, connective tissue. Epithelial tissue covers surfaces on both the inside and outside of the body; skin tissue is an epithelial tissue.

Circulatory system

Organs

Tissues form specialized structures called organs. Organs perform specific functions in the body. For example, the heart keeps blood flowing through its rhythmic contractions. Organs can be composed of any or all of the four basic tissue types. The heart, while mostly specialized muscle tissue, also contains nerve, connective, and epithelial tissues.

Heart

Digestive system

Organ Systems

Organ systems are groups of organs and tissues that all function together toward a single purpose. For example, the stomach, esophagus, and intestines are all part of the digestive system, which allows the human body to process and use nutrients. Other organ systems in the human body include the circulatory, respiratory, nervous, muscular, and skeletal systems.

human rights practices Human society is made of individuals within contexts tectonic plates not of the earth s crust but of groups and individuals who scrape and shift as we bump along competing for scarce resources and getting along These movements large and small are the products of actions individuals take in communities within families and legal structures These individuals are able to live longer yet continue to remain vulnerable to dangers arising from the environment substances struggles for power and a failure to understand that in most ways we are the same as our neighbors Yet it is because we live together in layers of diverse communities that we want our ability to speak to be unhindered by others use spirituality to help us understand ourselves and others possess a space and objects that are ours alone and join with groups that share our values and interests including circumstances where we do not know who our fellow neighbor is For this reason sociologists have identified the importance of movements and change in human societies When we collaborate in groups individuals can change the contours of their daily lives Within this book you will find the building blocks for human rights in our communities To understand why sometimes we enjoy human rights and other times we experience vulnerability and risk sociologists seek to understand the individual within her context Bringing together prominent sociologists to grapple with these questions Movements for Human Rights Locally and Globally offers insights into the ways that people move for and against human rights
