Henry Petroski

Honda Civic Gx Maintenance Schedule:

The Plan Edwin Black, 2009-01-02 Edwin Black's controversial and bitter pill crisis plan to rescue America once the oil stops. The must have go to book once the oil stops or perhaps just before it does. Companion to the best selling award winning *Internal Combustion*. See PlanForOilCrisis.com plus InternalCombustionBook.com. By the author of *IBM and the Holocaust* and *Banking on Baghdad*. **The Essential Engineer** Henry Petroski, 2011-03-08 From the acclaimed author of *The Pencil* and *To Engineer Is Human*. *The Essential Engineer* is an eye opening exploration of the ways in which science and engineering must work together to address our world's most pressing issues from dealing with climate change and the prevention of natural disasters to the development of efficient automobiles and the search for renewable energy sources. While the scientist may identify problems it falls to the engineer to solve them. It is the inherent practicality of engineering which takes into account structural, economic, environmental and other factors that science often does not consider that makes engineering vital to answering our most urgent concerns. Henry Petroski takes us inside the research, development and debates surrounding the most critical challenges of our time: exploring the feasibility of biofuels, the progress of battery operated cars and the question of nuclear power. He gives us an in depth investigation of the various options for renewable energy among them solar, wind, tidal and ethanol, explaining the benefits and risks of each. Will windmills soon populate our landscape the way they did in previous centuries? Will synthetic trees, said to be more efficient at absorbing harmful carbon dioxide than real trees, soon dot our prairies? Will we construct a sunshade in outer space to protect ourselves from dangerous rays? In many cases the technology already exists. What's needed is not so much invention as engineering. Just as the great achievements of centuries past—the steamship, the airplane, the moon landing—once seemed beyond reach, the solutions to the twenty first century's problems await only a similar coordination of science and engineering. Eloquently reasoned and written, *The Essential Engineer* identifies and illuminates these problems and above all sets out a course for putting ideas into action.

Economics of Unconventional Shale Gas Development William E. Hefley, Yongsheng Wang, 2014-12-03 This book examines the economics and related impacts of unconventional shale gas development. While focusing on the Marcellus and Utica Shales in the Mid Atlantic region, additional insights from other regions are included to provide a broader view of these issues. Shale gas development in recent years has changed the energy discussion in the US as existing reserves of natural gas, coupled with horizontal drilling and hydraulic fracturing, make exploitation of these reserves economically feasible. The importance of natural gas is seen as likely to continue to expand over the coming years and is expected to increase even further with environmental considerations such as greenhouse gas emissions. Horizontal drilling and hydraulic fracturing, producing natural gas from deposits such as the Marcellus Shale, is making the US a net producer of natural gas. Previous studies have examined the economic impact of exploration and production in the region. Other studies have addressed legal, environmental, biodiversity and public health impacts of unconventional shale development. This is the first volume to focus

solely on the economics and related financial impacts of this development This book not only fills the research gap but also provides information that policy makers and the public need to better understand this pressing issue *The Complete Idiot's Guide to Green Living* Trish Riley,2007-09-04 The environmental movement and rising awareness of global warming have sparked an interest in green living People want to know what they can do to live sustainable lives In this book you will find an overview of global warming and environmental degradation of air water soil what sustainable living is and how to do it how to cut down on carbon output the cause of global warming with alternative cars and fuels and environmentally friendly home and lawn care products Transportation Systems Planning Konstadinos G.
