How to write "references" in scientific journal articles

Editor in Chief, Journal of Patan Academy of Health Sciences (JPAHS), Patan Academy of Health Sciences (PAHS), Lalitpur, Nepal

Editorial

Referencing is integral part of scientific research, writing and publication. The 'why' to reference is straight forward than 'when' and 'how'. Referencing allows to trace the sources of accessible, documented evidence. It helps to expand and spread the web of knowledge, guiding readers, reviewers and editors to the original work for critical scrutiny and verification of the research questions, the methods used to obtain the results, and discussions to compare and contrast with the available literature. Copying other's ideas and works without proper acknowledgements of source is a serious misconduct, the plagiarism. Evidence based medical science involves detail description of ideas, its origin and development; by whom, when, where, why, how etc. Referencing helps in advancing the knowledge base, either in agreement or counter agreement. Some of the important reasons to cite references include: i. to acknowledge others work, ii. to give credit to the original source of work, iii. to direct readers to the original source of the information, iv. add credibility to one's own work.^{1,2}

The issue of 'when' to reference is not so straight forward. Referencing is needed 'to acknowledge the source of a findings, theories, definitions, techniques, instruments, formulas, to recognise the contradictory or different findings, to support a point not universally accepted by readers, to support a conceptual point, to justify the use of a methods, techniques, or instruments (e.g. reliability, validity, or appropriateness), to support the importance or viability of a research topics, questions, or purpose of a study, source of tables, photos, statistics, and diagrams, and when paraphrasing other's idea. The list can go on. The common knowledge shared in the public domain, undisputed facts freely and publicly circulating may not require citation, for example, sun rises from east, and other information freely shared by community and society. However, the complexity is that not everyone in a particular discipline or from different socio-culture background agree on what is common knowledge. Thus at times the simple logic is 'cite if in doubt cite'.
