Euro-Par 2003 Parallel Processing Harald Kosch, László Böszörményi, Hermann Hellwagner, 2004-06-01 EuroParConferenceSeries

The European Conference on Parallel Computing EuroPar is an international conference series dedicated to the promotion and advancement of all aspects of parallel and distributed computing. The major themes fall into the categories of hardware, software, algorithms, and applications. This year new and interesting topics were introduced like Peer-to-Peer Computing, Distributed Multimedia, Stems, and Mobile and Ubiquitous Computing. For the first time we organized a Demo Session showing many challenging applications. The general objective of EuroPar is to provide a forum promoting the development of parallel and distributed computing both as an industrial technique and an academic discipline, extending the frontiers of both the state of the art and the state of the practice. The industrial importance of parallel and distributed computing is supported this year by a special Industrial Session as well as a vendors exhibition. This is particularly important as currently parallel and distributed computing is evolving into a globally important technology; the buzzword Grid Computing clearly expresses this move. In addition, the trend to a global world is clearly visible in this year's EuroPar. The main audience for and participants at EuroPar are researchers in academic departments, industrial organizations, and government laboratories. EuroPar aims to become the primary choice of such professionals for the presentation of new results in their specific areas. EuroPar has its own Internet domain with a permanent Web site where the history of the conference series is described: <http://www.euro-par.org>. The EuroPar conference series is sponsored by the Association for Computer Machinery (ACM) and the International Federation for Information Processing (IFIP).

22nd European Symposium on Computer Aided Process Engineering, 2012-12-10 Computer aided process engineering (CAPE) plays a key design and operations role in the process industries. This conference features presentations by CAPE specialists and addresses strategic planning, supply chain issues, and the increasingly important area of sustainability audits. Experts collectively highlight the need for CAPE practitioners to embrace the three components of sustainable development: environmental, social, and economic progress, and the role of systematic and sophisticated CAPE tools in delivering these goals. Contributions from the international community of researchers and engineers using computing based methods in process engineering, Review of the latest developments in process systems engineering, Emphasis on a systems approach in tackling industrial and societal grand challenges.
